Bruce, John Trachtenberg, 2012-12-06 Carcinoma of the prostate increasingly dominates the attention of urologists for both scientific and clinical reasons The search for an explanation and the prediction of the variable behaviour of the malignant prostatic cell continues unabated The search for more precise tumour staging and more effective treatment is equally vigorous Editors Andrew Bruce and John Trachtenberg have assembled acknowledged leaders in prostate cancer to present those areas of direct interest to the clinician There are a number of other topics that might have been considered but most of these such as experimental tumour models or biochemical factors affecting cell growth still lack immediate application for the clinician Carcinoma of the prostate continues to have its highest incidence in the western world and the difference in comparison with the incidence in the Far East appears to be real and not masked by diagnostic or other factors A number of other epidemiological aspects need careful analysis Is the incidence increasing Is the survival improving Is the prognosis worse in the younger patient Epidemiological data are easily misused and misinterpreted so that a precise analysis of the known facts makes an important opening chapter to this book Titanborn Rhett C.
