

WHAT IS ENERGY?

NAME: _____ TEACHER: _____ DATE: _____

ANSWER KEY - ANSWER KEY - ANSWER KEY - ANSWER KEY - ANSWER KEY - ANSWER KEY

To answer the questions, fill in the blanks (look at the pictures for clues):

Energy helps us do things _____

Energy is light _____

Energy makes things grow _____

Energy is heat _____

Energy makes things move _____

Energy runs machines _____

What is renewable energy? Renewable energy sources can be replaced or made new in a short period of time.

The five renewable energy sources used most often are:

- 1) Sun (solar)
- 2) Wind
- 3) Water (hydropower)
- 4) Geothermal (heat trapped in the Earth)
- 5) Plant energy (biomass) from plants

The four non-renewable energy sources used most often are:

- 1) Oil/petroleum
- 2) Natural gas
- 3) Coal
- 4) Uranium (nuclear energy)

What is conservation? Doing things that save energy and using our energy wisely.

Chen, Arthur Eisenkraft, David Fortus, Joseph Krajcik, Knut Neumann, Jeffrey Nordine, Allison Scheff, 2014-04-09 This volume presents current thoughts research and findings that were presented at a summit focusing on energy as a cross cutting concept in education involving scientists science education

researchers and science educators from across the world The chapters cover four key questions what should students know about energy what can we learn from research on teaching and learning about energy what are the challenges we are currently facing in teaching students this knowledge and what needs be done to meet these challenges in the future Energy is one of the most important ideas in all of science and it is useful for predicting and explaining phenomena within every scientific discipline The challenge for teachers is to respond to recent policies requiring them to teach not only about energy as a disciplinary idea but also about energy as an analytical framework that cuts across disciplines Teaching energy as a crosscutting concept can equip a new generation of scientists and engineers to think about the latest cross disciplinary problems and it requires a new approach to the idea of energy This book examines the latest challenges of K 12 teaching about energy including how a comprehensive understanding of energy can be developed The authors present innovative strategies for learning and teaching about energy revealing overlapping and diverging views from scientists and science educators The reader will discover investigations into the learning progression of energy how understanding of energy can be examined and proposals for future directions for work in this arena Science teachers and educators science education researchers and scientists themselves will all find the discussions and research presented in this book engaging and informative

Numerical Methods for Conservation Laws LEVEQUE,2013-11-11 These notes developed from a course on the numerical solution of conservation laws first taught at the University of Washington in the fall of 1988 and then at ETH during the following spring The overall emphasis is on studying the mathematical tools that are essential in de veloping analyzing and successfully using numerical methods for nonlinear systems of conservation laws particularly for problems involving shock waves A reasonable un derstanding of the mathematical structure of these equations and their solutions is first required and Part I of these notes deals with this theory Part II deals more directly with numerical methods again with the emphasis on general tools that are of broad use I have stressed the underlying ideas used in various classes of methods rather than present ing the most sophisticated methods in great detail My aim was to provide a sufficient background that students could then approach the current research literature with the necessary tools and understanding vWithout the wonders of TeX and LaTeX these notes would never have been put together The professional looking results perhaps obscure the fact that these are indeed lecture notes Some sections have been reworked several times by now but others are still preliminary I can only hope that the errors are not too blatant Moreover the breadth and depth of coverage was limited by the length of these courses and some parts are rather sketchy
