*Machinery's Handbook* Erik Oberg, Christopher J. McCauley, 2012 *Machinery's Handbook* has been the most popular reference work in metalworking design engineering and manufacturing facilities and in technical schools and colleges throughout the world for nearly 100 years. It is universally acknowledged as an extraordinarily authoritative, comprehensive, and practical tool providing its users with the most fundamental and essential aspects of sophisticated manufacturing practice. The 29th edition of the Bible of the Metalworking Industries contains major revisions of existing content as well as new material on a variety of topics. It is the essential reference for Mechanical Manufacturing and Industrial Engineers, Designers, Draftsmen, Toolmakers, Machinists, Engineering and Technology Students, and the serious Home Hobbyist. New to this edition: micromachining; expanded material on calculation of hole coordinates; an introduction to metrology; further contributions to the sheet metal and presses section; shaft alignment; taps and tapping; helical coil screw thread inserts; solid geometry; distinguishing between bolts and screws; statistics; calculating thread dimensions; keys and keyways; miniature screws; metric screw threads; and fluid mechanics. Numerous major sections have been extensively reworked and renovated throughout, including Mathematics, Mechanics, and Strength of Materials; Properties of Materials; Dimensioning; Gaging and Measuring; Machining Operations; Manufacturing Process; Fasteners; Threads and Threading; and Machine Elements. The metric content has been greatly expanded. Throughout the book, wherever practical, metric units are shown adjacent to the U.S. customary units in the text. Many formulas are now presented with equivalent metric expressions, and additional metric examples have been added. The detailed tables of contents, located at the beginning of each section, have been expanded and fine-tuned to make finding topics easier and faster. The entire text of this edition, including all the tables and equations, has been reset, and a great many of the figures have been redrawn. The page count has increased by nearly 100 pages to 2,800 pages. Updated Standards.

*Carbon Dioxide Mineralization and Utilization* Pen-Chi Chiang, Shu-Yuan Pan, 2017-03-04. This book focuses on an important technology for mineralizing and utilizing CO<sub>2</sub> instead of releasing it into the atmosphere. CO<sub>2</sub> mineralization and utilization demonstrated in the waste-to-resource supply chain can reduce carbon dependency, promote resource and energy efficiency, and lessen environmental quality degradation, thereby reducing environmental risks and increasing economic benefits towards Sustainable Development Goals (SDG). In this book, comprehensive information on CO<sub>2</sub> mineralization and utilization via accelerated carbonation technology from theoretical and practical considerations was presented in 20 chapters. It first introduces the concept of the carbon cycle from the thermodynamic point of view and then discusses principles and applications regarding environmental impact assessment of carbon capture, storage, and utilization technologies. After that, it describes the theoretical and practical considerations for Accelerated Carbonation Mineralization, including analytical methods and systematically presents the carbonation mechanism and modeling, process chemistry, reaction kinetics, and mass transfer and system analysis, design and analysis of experiments, life cycle assessment, and cost-benefit analysis. It then provides physico-chemical properties of different types of feedstock for CO<sub>2</sub> mineralization and then explores the valorization of carbonated products as green materials. Lastly, an integral approach for waste treatment and resource recovery is introduced, and the carbonation system is critically assessed and optimized based on engineering, environmental, and economic 3E analysis. The book is a valuable resource for readers who take scientific and practical interests in the current and future Accelerated Carbonation Technology for CO<sub>2</sub> Mineralization and Utilization.

**Contouring Human Development** Mukunda Mishra, Soumendu Chatterjee, 2020-05-11 This book acquaints readers with a range of techniques to help them effectively identify, record, map, analyze, and report on patterns in various dimensions of human development (HD) with spatial scales down to the village level. It is impossible to capture HD at the local and global scale with only a single index because differences in HD at the international scale are caused by general factors, whereas local scale differences are influenced by specific factors. This book offers a variety of methods for scientifically mapping HD at any spatial scale. It covers how to rationally select variables, how to test the models, how to validate the results, and how to analyze them. For this purpose, it employs a case study on an Indian district. The socio-economic factors regulating the patterns of HD are now more complex than they were only a few decades ago, making it essential to incorporate newer models in order to successfully replicate the real-world situation. Accordingly, the book offers essential methodological tools and techniques for mapping HD. It sheds new light on a handful of statistical, multivariate analysis, and machine learning algorithms that are rarely used in the social sciences when dealing with HD, yet have sound mathematical and statistical bases. These techniques can be successfully used for predictive analysis in the earth, natural sciences, decision sciences, and management disciplines and are equally effective in terms of capturing, predicting, and projecting the composite HD landscape. This book will especially benefit two groups of readers: firstly, HD practitioners who want to find out why some areas are doing better than others by exploring the complex interactions of spatially linked variables with different HD parameters; and secondly, practitioners in other branches of the social sciences who are not concerned with HD but are looking for hands-on training with techniques they can apply in their respective field of spatial investigations.
