Identifying the Culprit National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Scientific Approaches to Understanding and Maximizing the Validity and Reliability of Eyewitness Identification in Law Enforcement and the Courts, 2015-01-16
Identifying the Culprit: Assessing Eyewitness Identification makes the case that better data collection and research on eyewitness identification, new law enforcement training protocols, standardized procedures for administering line-ups, and improvements in the handling of eyewitness identification in court can increase the chances that accurate identifications are made. This report explains the science that has emerged during the past 30 years on eyewitness identifications and identifies best practices in eyewitness procedures for the law enforcement community and in the presentation of eyewitness evidence in the courtroom. In order to continue the advancement of eyewitness identification research, the report recommends a focused research agenda.

Correlations of Soil and Rock Properties in Geotechnical Engineering Jay Ameratunga, Nagaratnam Sivakugan, Braja M. Das, 2015-12-11
This book presents

a one stop reference to the empirical correlations used extensively in geotechnical engineering Empirical correlations play a key role in geotechnical engineering designs and analysis Laboratory and in situ testing of soils can add significant cost to a civil engineering project By using appropriate empirical correlations it is possible to derive many design parameters thus limiting our reliance on these soil tests The authors have decades of experience in geotechnical engineering as professional engineers or researchers The objective of this book is to present a critical evaluation of a wide range of empirical correlations reported in the literature along with typical values of soil parameters in the light of their experience and knowledge This book will be a one stop shop for the practising professionals geotechnical researchers and academics looking for specific correlations for estimating certain geotechnical parameters The empirical correlations in the forms of equations and charts and typical values are collated from extensive literature review and from the authors database
