The Gastrointestinal Circulation Peter R. Kviety, 2010 The microcirculation of the gastrointestinal tract is under the control of both myogenic and metabolic regulatory systems The myogenic mechanism contributes to basal vascular tone and the regulation of transmural pressure while the metabolic mechanism is responsible for maintaining an appropriate balance between O<sub>2</sub> demand and O<sub>2</sub> delivery In the postprandial state hydrolytic products of food digestion elicit a hyperemia which serves to meet the increased O<sub>2</sub> demand of nutrient assimilation Metabolically linked factors e g tissue pO<sub>2</sub> adenosine are primarily responsible for this functional hyperemia The fenestrated capillaries of the gastrointestinal mucosa are relatively permeable to small hydrolytic products of food digestion e g glucose yet restrict the transcapillary movement of larger molecules e g albumin This allows for the absorption of hydrolytic products of food digestion without compromising the oncotic pressure gradient governing transcapillary fluid movement and edema formation The gastrointestinal microcirculation is also an important component of the mucosal defense system whose function is to prevent and rapidly repair inadvertent epithelial injury by potentially noxious constituents of chyme Two pathological conditions in which the gastrointestinal circulation plays an important role are ischemia reperfusion and chronic portal hypertension Ischemia reperfusion results in mucosal edema and disruption of the epithelium due in part to an inflammatory response e g increase in capillary permeability to macromolecules and neutrophil infiltration Chronic portal hypertension results in an increase in gastrointestinal blood flow due to an imbalance in vasodilator and vasoconstrictor influences on the microcirculation Table of Contents Introduction Anatomy Regulation of Vascular Tone and Oxygenation Extrinsic Vasoregulation Neural and Humoral Postprandial Hyperemia Transcapillary Solute Exchange Transcapillary Fluid Exchange Interaction of Capillary and Interstitial Forces Gastrointestinal Circulation and Mucosal Defense Gastrointestinal Circulation and Mucosal Pathology I Ischemia Reperfusion Gastrointestinal Circulation and Mucosal Pathology II Chronic Portal Hypertension Summary and Conclusions References Author Biography

**Medical Biochemistry** Antonio Blanco, Gustavo Blanco, 2022-03-23 This second edition of *Medical Biochemistry* is supported by more than 45 years of teaching experience providing coverage of basic biochemical topics including the structural, physical, and chemical properties of water, carbohydrates, lipids, proteins, and nucleic acids. In addition, the general aspects of thermodynamics, enzymes, bioenergetics, and metabolism are presented in straightforward and easy-to-comprehend language. This book ties these concepts into more complex aspects of biochemistry using a systems approach, dedicating chapters to the integral study of biological phenomena including cell membrane structure and function, gene expression and regulation, protein synthesis and post-translational modifications, metabolism in specific organs and tissues, autophagy, cell receptors, signal transduction pathways, biochemical bases of endocrinology, immunity, vitamins and minerals, and hemostasis. The field of biochemistry is continuing to grow at a fast pace. This edition has been revised and expanded with all new sections on the cell plasma membrane, the human microbiome, autophagy, noncoding small and long RNAs, epigenetics, genetic diseases, virology, and vaccines, cell signaling, and different modes of programmed cell death. The book has also been updated with full color figures, new tables, chapter summaries, and further medical examples to improve learning and better illustrate the concepts described and their clinical significance. Integrates basic biochemistry principles with molecular biology and molecular physiology. Illustrates basic biochemical concepts through medical and physiological examples. Utilizes a systems approach to understanding biological phenomena. Fully updated for recent studies and expanded to include clinically relevant examples and succinct chapter summaries.

**Nutrient Requirements of Fish and Shrimp** National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on the Nutrient Requirements of Fish and Shrimp, 2011-05-25 Aquaculture now supplies half of the seafood and fisheries products consumed worldwide and is gaining international significance as a source of food and income. Future demands for seafood and fisheries products can only be met by expanded aquaculture production. Such production will likely become more intensive and will depend increasingly on nutritious and efficient aquaculture feeds containing ingredients from sustainable sources. To meet this challenge, *Nutrient Requirements of Fish and Shrimp* provides a comprehensive summary of current knowledge about nutrient requirements of fish and shrimp and supporting nutritional science. This edition incorporates new material and significant updates to information in the 1993 edition. It also examines the practical aspects of feeding of fish and shrimp. *Nutrient Requirements of Fish and Shrimp* will be a key resource for everyone involved in aquaculture and for others responsible for the feeding and care of fish and shrimp. It will also aid scientists in developing new and improved approaches to satisfy the demands of the growing aquaculture industry.
