Polymer Process Engineering R. Griskey, 2012-12-06 Polymers are ubiquitous and pervasive in industry science and technology These giant molecules have great significance not only in terms of products such as plastics films elastomers fibers adhesives and coatings but also less obviously though none the less importantly in many leading industries aerospace electronics automotive biomedical etc Well over half the chemists and chemical engineers who graduate in the United States will at some time work in the polymer industries If the professionals working with polymers in the other industries are taken into account the overall number swells to a much greater total It is obvious that knowledge and understanding of polymers is essential for any engineer or scientist whose professional activities involve them with these macromolecules Not too long ago formal education relating to polymers was very limited indeed almost nonexistent Speaking from a personal viewpoint I can recall my first job after completing my Ph D The job with E I Du Pont de Nemours dealt with polymers an area in which I had no university training There were no courses in polymers offered at my alma mater My experience incidentally was the rule and not the exception

Truncated Predictor Feedback for Time-Delay Systems Bin Zhou, 2014-05-29 This book provides a systematic approach to the design of predictor based controllers for time varying linear systems with either time varying input or state delays Differently from those traditional predictor based controllers which are infinite dimensional static feedback laws and may cause difficulties in their practical implementation this book develops a truncated predictor feedback TPF which involves only finite dimensional static state feedback Features and topics A novel approach referred to as truncated predictor feedback for the stabilization of time varying time delay systems in both the continuous time setting and the discrete time setting is built systematically Semi global and global stabilization problems of linear time delay systems subject to either magnitude saturation or energy constraints are solved in a systematic manner Both stabilization of a single system and consensus of a group of systems multi agent systems are treated in a unified manner by applying the truncated predictor feedback and predictor feedback The properties of the solutions to a class of parametric differential and difference Lyapunov matrix equations are presented in detail Detailed numerical examples and applications to the spacecraft rendezvous and formation flying problems are provided to demonstrate the usefulness of the presented theoretical results This book can be a useful resource for the researchers engineers and graduate students in the fields of control applied mathematics mechanical engineering electrical engineering and aerospace engineering
