This Handbook of Numerical Simulation of In-Flight Icing covers an array of methodologies and technologies on numerical simulation of in-flight icing and its applications. Comprised of contributions from internationally recognized experts from the Americas, Asia, and the EU, this authoritative, self-contained reference includes best practices and specification data spanning the gamut of simulation tools available internationally that can be used to speed up the certification of aircraft and make them safer to fly into known icing. The collection features nine sections concentrating on aircraft, rotorcraft, jet engines, UAVs; ice protection systems, including hot-air, electrothermal, and others; sensors and probes, CFD in the aid of testing, flight simulators, and certification process acceleration methods. Incorporating perspectives from academia, commercial, government R&D, the book is ideal for a range of engineers and scientists concerned with in-flight icing applications. This book, "Heat and Mass Transfer in Porous Media", presents a set of new developments in the field of basic and applied research work on the physical and chemical aspects of heat and mass transfer phenomena in a porous medium domain, as well as related material properties and their measurements. The book contents include both theoretical and experimental developments, providing a self-contained major reference that is appealing to both the scientists and the engineers. At the same time, these topics will encounter of a variety of scientific and engineering disciplines, such as chemical, civil, agricultural, mechanical engineering, etc. The book is divided in several chapters that intend to be a short monograph in which the authors summarize the current state of knowledge for benefit of professionals. Vol. 100, No. 1 This volume, IFIP AICT 660, constitutes the refereed proceedings of the IFIP WG 8.6 International Working Conference "Co-creating for Context in Prospective Transfer and Diffusion of IT" on Transfer and Diffusion of IT, TDIT 2022, held in Maynooth, Ireland, during June 15-16, 2022. The 19 full papers and 10 short papers presented were carefully reviewed and selected from 60 submissions. The papers focus on the re-imagination of diffusion and adoption of emerging technologies. They are organized in the following parts: Disasters often strike without warning and leave a trail of destruction in their wake. Yet armed with the right tools and information, survivors can fend for themselves and get through even the toughest circumstances. Matthew Stein's When Disaster Strikes provides a thorough, practical guide for how to prepare for and react in many of life's most unpredictable scenarios. In this disaster-preparedness manual, he outlines the materials you'll need-from food and water, to shelter and energy, to first-aid and survival skills-to help you safely live through the worst. When Disaster Strikes covers how to find and store food, water, and clothing, as well as the basics of installing back-up power and lights. You'll learn how to gather and sterilize water, build a fire, treat injuries in an emergency, and use alternative medical sources when conventional ones are unavailable. Stein instructs you on the smartest responses to natural disasters-such as fires, earthquakes, hurricanes and floods-how to keep warm during winter storms, even how to protect yourself from attack or other dangerous situations. With this comprehensive guide in hand, you can be sure to respond quickly, correctly, and confidently when a crisis threatens. Since the 1960's individuals and organisations throughout the world have been building

geographic databases used in conjunction with geographic hardware and software systems to collect, analyse, display and archive digital data. Through the years it was recognised that efficiencies could be gained if the geographic database built by one group could be used by multiple users across different computer systems and formats. Therefore, it was acknowledged that spatial database transfer standards were needed to facilitate the exchange and transfer of digital geographic data. Throughout the 1980's several organisations worldwide began working on the problem of producing spatial database transfer standards. As this work was initiated, research workers began to informally compare notes and developments. The International Cartographic Association [ICA], recognising the worldwide importance of standards, organised a Standards Working Group. The initial goal of this working group was to produce a monograph reporting on the present state of development in digital database transfer standards. This book is a unique collection of reports by individual nations and international organisations that describe existing geographic standards and summarize efforts to develop geographic database transfer standards worldwide. Current with Codes through 2014 A carefully selected group of home wiring projects that goes beyond the basics of adding a receptacle or rewiring a lamp. With the information in this book you can take your skill in working with electrical systems to a new level. Projects include: adding a stand-alone, direct-current circuit powered by the sun; installing an automatic standby power system; replacing a main service panel; grounding and bonding your electrical system; installing a radiant flooring system; and working with 240-volt and three-phase power. With contributions from leading experts, this second volume in the series strikes a balance between generic and specific fundamentals and generic and specific applications. After opening with a broad overview of the field of high-performance scientific computing and its role in fluid flow and heat transfer problems, the book goes on to cover such topics as: unstructured meshes; spectral element method; use of the finite volume method for the numerical solution of radiative heat transfer problems; heat conduction and the use of the boundary element method for both steady and unsteady problems; special numerical issues related to solving microscale heat transfer problems; the Monte Carlo Method; flow and heat transfer in porous media; and the thermal management of electronic systems. These regional books cover electrical wiring in single family houses. They simplify the stated requirements for inspection in each province so that homeowners can safely, easily and confidently make their own electrical installations. Beef up your home's wiring infrastructure and control systems to accommodate the latest digital home products. Upgrade wiring in your existing home room-by-room, system-by-system or wire the home you're building. Learn wiring for the latest digital home technologies -- whole home audio, outdoor audio, VoIP, PA systems, security systems with Web cams, home theater, home networking, alarms, back-up systems, and more. Perfect whether you do your own electrical work or want to talk intelligently to an electrical contractor. There have been significant changes in the academic environment and in the workplace related to computing. Further changes are likely to take place. At Rensselaer Polytechnic Institute, the manner in which the subject of heat transfer is presented is evolving so as to accommodate to and, indeed, to participate in, the changes. One obvious change has been the introduction of the electronic calculator. The typical engineering student can now evaluate logarithmic, trigonometric functions, and hyperbolic functions accurately by pushing a button. Teaching techniques and text presentations designed to avoid evaluation of these functions or the need to look them up in tables with associated interpolation are no longer necessary. Similarly, students are increasingly proficient in the use of computers. At RPI, every engineering student takes two semesters of computing as a freshman and is capable of applying the computer to problems he or she encounters. Every student is given personal time on the campus computer. In addition, students have access to personal computers. In some colleges, all engineering students are provided with personal computers, which can be applied to a variety of tasks.
