Cats' Paws and Catapults: Mechanical Worlds of Nature and People Mar 30 2024 "Full of ideas and well-explained principles that will bring new understanding of everyday things to both scientists and non-scientists alike."—R. McNeill Alexander, *Nature*  
Nature and humans build their devices with the same earthly materials and use them in the same air and water, pulled by the same gravity. Why, then, do their designs diverge so sharply? Humans, for instance, love right angles, while nature's angles are rarely right and usually rounded. Our technology goes around on wheels—and on rotating pulleys, gears, shafts, and cams—yet in nature only the tiny propellers of bacteria spin as true wheels. Our hinges turn because hard parts slide around each other, whereas nature's hinges (a rabbit's ear, for example) more often swing by bending flexible materials. In this marvelously surprising, witty book, Steven Vogel compares these two mechanical worlds, introduces the reader to his field of biomechanics, and explains how the nexus of physical law, size, and convenience of construction determine the designs of both people and nature. "This elegant comparison of human and biological technology will forever change the way you look at each."—Michael LaBarbera, *American Scientist*

Thinking Like an Engineer Dec 03 2021 A classic work in the field of practical and professional ethics, this collection of nine essays by English philosopher and educator Henry Sidgwick (1838-1900) was first published in 1898 and forms a vital complement to Sidgwick's major treatise on moral theory, *The Methods of Ethics*. Reissued here as Volume One in a new series sponsored by the Association for Practical and Professional Ethics, the book is composed chiefly of addresses to members of two ethical societies that Sidgwick helped to found in Cambridge and London in the 1880s. Clear, taut, and lively, these essays demonstrate the compassion and calm reasonableness that Sidgwick brought to all his writings. As Sidgwick explains in his opening essay, the societies he addressed aimed to allow academics, professionals, and others to pursue joint efforts at reaching "some results of value for practical guidance and life." Sidgwick hoped that members might discuss such questions as when, if ever, public officials might be justified in lying or in breaking promises, whether scientists could legitimately inflict suffering on animals for research purposes, when nations might have just cause in going to war, and a score of other issues of ethics in public and private life still debated a century later. This valuable reissue returns *Practical Ethics* to its rightful place in Sidgwick's oeuvre. Noted ethicist Sissela Bok provides a superb Introduction, ranging over the course of Sidgwick's life and career and underscoring the relevance of *Practical Ethics* to contemporary debate. She writes: "*Practical Ethics*, the last book that Henry Sidgwick published before his death in 1900, contains the distillation of a lifetime of reflection on ethics and on what it would take for ethical debate to be 'really of use in the solution of practical

questions." This rich, engaging work is essential reading for all concerned with the relationship between ethical theory and practice, and with the questions that have driven the study of professional ethics in recent years.

Project Evaluation Essays and Case Studies May 20 2023 This book is based primarily upon materials prepared between 1997 and 2010 by Carl D. Martland for 1.011 Project Evaluation, a required course within MIT's Department of Civil & Environmental Engineering that he designed, developed, and taught for many years. It is structured to be of interest to anyone interested in infrastructure systems, especially engineers, planners and managers who design, build and operate such systems. The book may also be of interest to students in planning or engineering who are interested in transportation, water resources, energy, city planning, or real estate development. In 2012, John Wiley & Sons, Inc. published a 500-page textbook *Toward More Sustainable Infrastructure: Project Evaluation for Planners and Engineers* that was also authored by Mr. Martland and based upon the same course materials. That book, which was designed and formatted as a standard textbook for an undergraduate class, includes many more examples, hundreds of problems for students, an additional chapter on project management, and several open-ended case studies that can be used for class assignments. Instructors who purchase that textbook and assign it for their own class can obtain the textbook, a teaching guide, solutions to problems, and related power point presentations from Wiley. Additional materials related to 1.011 Project Evaluation can be obtained on-line from MIT's Open Courseware website, which can be accessed from MIT's homepage ([www.mit.edu](http://www.mit.edu)).

Fixing Language May 08 2022 Herman Cappelen investigates ways in which language (and other representational devices) can be defective, and how they can be improved. In all parts of philosophy there are philosophers who criticize the concepts we have and propose ways to improve them. Once one notices this about philosophy, it's easy to see that revisionist projects occur in a range of other intellectual disciplines and in ordinary life. That fact gives rise to a cluster of questions: How does the process of conceptual amelioration work? What are the limits of revision? (How much revision is too much?) How does the process of revision fit into an overall theory of language and communication? Fixing Language aims to answer those questions. In so doing, it aims also to draw attention to a tradition in 20th- and 21st-century philosophy that isn't sufficiently recognized. There's a straight intellectual line from Frege and Carnap to a cluster of contemporary work that isn't typically seen as closely related: much work on gender and race, revisionism about truth, revisionism about moral language, and revisionism in metaphysics and philosophy of mind. These views all have common core commitments: revision is both possible and important. They also face common challenges about the methods, assumptions, and limits of revision.

On the Trail of Stevenson Aug 30 2021 This is the uncensored first issue, first edition of Clayton Meeker Hamilton's 1915 biography of Robert Louis Stevenson. Comments about Stevenson's private life and his relationship with his wife, Fanny, offended Fanny's daughter (and Stevenson's stepdaughter) Isobel Field, which led to the book being withdrawn from publication shortly after it appeared in October 1915. A new issue of the book appeared later in the same year, with a number of passages accordingly rewritten to remove anything controversial .

Essays in Post-Critical Philosophy of Technology Aug 11 2022 Technology, in all its forms, has had and continues to have an indisputable impact on society and culture. Philosophy of technology seeks to understand this impact and the meaning of technology for society and culture. Although its origins can be traced back to the Greeks, it wasn't until the late 19th century to the beginning of the 20th century that it gained ground as a philosophical discipline. Now more than ever it is considered an essential philosophical enterprise. 'The Budapest Workshop on Philosophy of Technology' was a lively and successful event that sought to discuss, reflect on and apply this branch of philosophical inquiry to both historical and contemporary examples. Importantly, the contributors' methodological approaches were influenced by, although not limited to, Michael Polanyi's term 'post-critical'. Moving beyond the rigidity of past approaches, the selected essays were driven by two lines of inquiry, what has been the historical role of technology in social and

scientific change? And, how can a 'post-critical' approach enhance and extend our understanding of philosophy of technology? This edited volume begins by exploring the role of technology in social and scientific developments from a historical perspective, before moving towards a discussion of philosophy of technology from a 'Post-Critical' epistemic stance. Free from the constraints of previous methodologies, the third part of this work engages with the term 'Post-Critical' in its broadest sense. The contributors to this section consider the phenomenology of the body and the influence of technology on our lives. Finally, the four concluding chapters of this book apply this philosophical approach to a wide range of contemporary problems from Decision Support Systems to Crisis Communication.
