Answer Set Programming Vladimir Lifschitz, 2019-08-29 Answer set programming ASP is a programming methodology oriented towards combinatorial search problems In such a problem the goal is to find a solution among a large but finite number of possibilities The idea of ASP came from research on artificial intelligence and computational logic ASP is a form of declarative programming an ASP program describes what is counted as a solution to the problem but does not specify an algorithm for solving it Search is performed by sophisticated software systems called answer set solvers Combinatorial search problems often arise in science and technology and ASP has found applications in diverse areas in historical linguistic in bioinformatics in robotics in space exploration in oil and gas industry and many others The importance of this programming method was recognized by the Association for the Advancement of Artificial Intelligence in 2016 when AI Magazine published a special issue on answer set programming The book introduces the reader to the theory and practice of ASP It describes the input language of the answer set solver CLINGO which was designed at the University of Potsdam in Germany and is used today by ASP programmers in many countries It includes numerous examples of ASP programs and present the mathematical theory that ASP is based on There are many exercises with complete solutions
