Machine Vision Fabio Solari,Manuela Chessa,Silvio P. Sabatini,2012-03-23 Vision plays a fundamental role for living beings by allowing them to interact with the environment in an effective and efficient way The ultimate goal of Machine Vision is to endow artificial systems with adequate capabilities to cope with not a priori predetermined situations To this end we have to take into account the computing constraints of the hosting architectures and the specifications of the tasks to be accomplished to continuously adapt and optimize the visual processing techniques Nevertheless by exploiting the low cost computational power of off the shell computing devices Machine Vision is not limited any more to industrial environments where situations and tasks are simplified and very specific but it is now pervasive to support system solutions of everyday life problems

Analysis and Interpretation of Range Images Ramesh C. Jain,1990 Computer vision researchers have been frustrated in their attempts to automatically derive depth information from conventional two dimensional intensity images Research on shape from texture shape from shading and shape from focus is still in a laboratory stage and had not seen much use in commercial machine vision systems A range image or a depth map contains explicit information about the distance from the sensor to the object surfaces within the field of view in the scene Information about surface geometry which is important for say three dimensional object recognition is more easily extracted from 2 1 2 D range images than from 2D intensity images As a result both active sensors such as laser range finders and passive techniques such as multi camera stereo vision are being increasingly utilized by vision researchers to solve a variety of problems This book contains chapters written by distinguished computer vision researchers covering the following areas Overview of 3D Vision Range Sensing Geometric Processing Object Recognition Navigation Inspection Multisensor Fusion A workshop report written by the editors also appears in the book It summarizes the state of the art and proposes future research directions in range image sensing processing interpretation and applications The book also contains an extensive up to date bibliography on the above topics This book provides a unique perspective on the problem of three dimensional sensing and processing it is the only comprehensive collection of papers devoted to range images Both academic researchers interested in research issues in 3D vision and industrial engineers in search of solutions to particular problems will find this a useful reference book

Intelligent Machine Vision Bruce Batchelor, Frederick Waltz, 2012-12-06 A number of important aspects of intelligent machine vision in one volume describing the state of the art and current developments in the field including fundamentals of intelligent image processing for machine vision systems algorithm optimisation implementation in high speed electronic digital hardware implementation in an integrated high level software environment and applications for industrial product quality and process control Backed by numerous illustrations created using the authors IP software this book will be of interest to researchers in the field of machine vision wishing to understand the discipline and develop new techniques Also useful for under and postgraduates
