[The Complete Technology Book on Processing, Dehydration, Canning, Preservation of Fruits & Vegetables \(Processed Food Industries\) 4th Revised Edition](#) NIIR Board of Consultants & Engineers, 2019-10-18

Fruits and vegetables are processed into a variety of products such as juices and concentrates, pulp, canned and dehydrated products, jams and jellies, pickles and chutneys etc. The extent of processing of fruits and vegetables varies from one country to another. The technology for preservation also varies with type of products and targeted market. Owing to the perishable nature of the fresh produce, international trade in vegetables is mostly confined to the processed forms. India is the second largest producer of fruits and vegetables in the world with an annual production of million tonnes. It accounts for about 15 per cent of the world's production of vegetables. Due to the short shelf life of these crops, as much as 30-35% of fruits and vegetables perish during harvest, storage, grading, transport, packaging and distribution. Hence there is a need for processing technology of fruits and vegetables to cater the domestic demand. The major contents of the book are procedures for fruit and vegetable preservation, chemical preservation of foods, food preservation by fermentation, preservation by drying, canning, fruits, syrups and brines for canning, fruit beverages, fermented beverages, jams, jellies and marmalades, tomato products, chutneys, sauces and pickles, vegetable preparation for processing, vegetable juices, sauces and soups, vegetable dehydration, freezing of vegetables etc. The book also contains sample plant layout and photographs of machinery with suppliers' contact details. A total guide to manufacturing and entrepreneurial success in one of today's most food processing industry. This book is one stop guide to one of the fastest growing sectors of the food processing industry where opportunities abound for manufacturers, retailers and entrepreneurs. This is the only complete handbook on the commercial production of food processing products. It serves up a feast of how to information from concept to purchasing equipment.

rapidly and it is estimated that within a generation more than 50 per cent of the developing world's population will live in cities. Public transport policy can contribute to reducing urban poverty both directly by providing access and mobility for the poor as well as by facilitating economic growth. This publication examines the nature and magnitude of urban transport problems in developing and transition economies particularly with respect to the needs of the poor. It also suggests ways the World Bank and other development agencies can best support the development of sustainable urban transport policies.
