Engaging Student Voices in Higher Education Simon Lygo-Baker, Ian M. Kinchin, Naomi E. Winstone, 2019-07-01 This book examines the importance of exploring the varied and diverse perspectives of student experiences In both academic institutions and everyday discourse the notion of the student voice is an ever present reminder of the importance placed upon the student experience in Higher Education particularly in a context where the financial burden of undertaking a university education continues to grow The editors and contributors explore how notions of the student voice as a single monolithic entity may in fact obscure divergence in the experiences of students Placing so much emphasis on the student voice may lead educators and policy makers to miss important messages communicated or consciously uncommunicated through student actions This book also explores ways of working in partnership with students to develop their own experiences It is sure to be of interest and value to scholars of the student experience and its inherent diversity

Genetics and the Extinction of Species Laura Landweber, Andrew Dobson, 2021-01-12 Darwin s Origin of Species and Dobzhansky s Genetics and the Origin of Species have been the cornerstones of modern evolutionary and population genetic theory for the past hundred years but in the twenty first century biologists will face graver problems of extinction In this collection a team of leading biologists demonstrates why the burgeoning field of conservation biology must continue to rely on the insights of population genetics if we are to preserve the diversity of living species Technological and theoretical developments throughout the 1990s have allowed for important new insights into how populations have evolved in response to past selection pressures while providing a broad new understanding of the genetic structure of natural populations The authors explore these advances and argue for the applicability of new genetic methods in conservation biology The volume covers such topics as the reasons for extinctions the best ways to measure biodiversity and the benefits and drawbacks of policies like captive breeding Genetics and the Extinction of Species is a rich source of information for biologists and policymakers who want to learn more about the host of tools theories and approaches available for conserving biodiversity In addition to the editors the contributors to the volume are William Amos Rebecca Cann Kathryn Rodriguez Clark Leslie Douglas Leonard Freed Paul Harvey Kent Holsinger Russell Lande and Helen Steers

Neuropeptide Systems as Targets for Parasite and Pest Control

Timothy G. Geary, Aaron Maule, 2011-01-13 The need to continually discover new agents for the control or treatment of invertebrate pests and pathogens is undeniable Agriculture both animal and plant succeeds only to the extent that arthropod and helminth consumers vectors and pathogens can be kept at bay Humans and their companion animals are also plagued by invertebrate parasites The deployment of chemical agents for these purposes inevitably elicits the selection of resistant populations of the targets of control necessitating a regular introduction of new kinds of molecules Experience in other areas of chemotherapy has shown that a thorough understanding of the biology of disease is an essential platform upon which to build a discovery program Unfortunately investment of research resources into understanding the basic physiology of invertebrates as a strategy to illuminate new molecular targets for pesticide and parasiticide discovery has been scarce and the pace of introduction of new molecules for these indications has been slowed as a result An exciting and so far unexploited area to explore in this regard is invertebrate neuropeptide physiology This book was assembled to focus attention on this promising field by compiling a comprehensive review of recent research on neuropeptides in arthropods and helminths with contributions from many of the leading laboratories working on these systems
