

NUCLEAR CHEMISTRY - WORKSHEET

1. When stable, nonradioactive nitrogen in the air is subject to neutron bombardment during a hydrogen bomb explosion, a single neutron is absorbed by the nitrogen nucleus and a proton is emitted (given off). Write a balanced nuclear equation for this reaction and name the other product of the reaction.

2. A radioactive element, A, with a mass of 212 and atomic number 84, emits an alpha particle and changes into element B. Element B emits a beta particle and is converted to element C.

a) Write nuclear equations for the formation of elements B and C.

b) What are the atomic masses and atomic number of elements A, B and C?

Masses are on top; atomic numbers at bottom.

c) Name elements A, B and C.

Polonium, Lead, and Bismuth.

3. Complete the following nuclear equations and state the general type:

a) ${}^0_{-1}\beta$ or ${}^0_{-1}\text{e}$	b) ${}^{210}_{81}\text{Tl}$
c) ${}^{120}_{50}\text{Sn}$	d) ${}^{182}_{70}\text{Er}$
e) ${}^1_1\text{H}$	f) ${}^1_0\text{n}$

Uranium Enrichment and Nuclear Weapon Proliferation Allan S. Krass, Peter Boskma, Boelie Elzen, Wim A. Smit, Stockholm International Peace Research Institute, 2020-11-20 Originally published in 1983 this book presents both the technical and political information necessary to evaluate the emerging threat to world security posed by recent advances in uranium enrichment technology Uranium enrichment has played a relatively quiet but important role in the history of efforts by a number of nations to acquire nuclear weapons and by a number of others to prevent the proliferation of nuclear weapons For many years the uranium enrichment industry was dominated by a single method gaseous diffusion which was technically complex extremely capital intensive and highly inefficient in its use of energy As long as this remained true only the richest and most technically advanced nations

could afford to pursue the enrichment route to weapon acquisition But during the 1970s this situation changed dramatically Several new and far more accessible enrichment techniques were developed stimulated largely by the anticipation of a rapidly growing demand for enrichment services by the world wide nuclear power industry This proliferation of new techniques coupled with the subsequent contraction of the commercial market for enriched uranium has created a situation in which uranium enrichment technology might well become the most important contributor to further nuclear weapon proliferation Some of the issues addressed in this book are A technical analysis of the most important enrichment techniques in a form that is relevant to analysis of proliferation risks A detailed projection of the world demand for uranium enrichment services A summary and critique of present institutional non proliferation arrangements in the world enrichment industry and An identification of the states most likely to pursue the enrichment route to acquisition of nuclear weapons
