**In Defense of Monopoly** Richard B. McKenzie,Dwight R. Lee,2019-02-28 In Defense of Monopoly offers an unconventional but empirically grounded argument in favor of market monopolies Authors McKenzie and Lee claim that conventional static models exaggerate the harm done by real world monopolies and they show why some degree of monopoly presence is necessary to maximize the improvement of human welfare over time Inspired by Joseph Schumpeter s suggestion that market imperfections can drive an economy s long term progress In Defense of Monopoly defies conventional assumptions to show readers why an economic system s failure to efficiently allocate its resources is actually a necessary precondition for maximizing the system s long term performance the perfectly fluid competitive economy idealized by most

economists is decidedly inferior to one characterized by market entry and exit restrictions or costs An economy is not a board game in which players compete for a limited number of properties nor is it much like the kind of blackboard games that economists use to develop their monopoly models As McKenzie and Lee demonstrate the creation of goods and services in the real world requires not only competition but the prospect of gains beyond a normal competitive rate of return

Baldwin,2008-04-15 Interest in U S trade policy has been stimulated in recent years by the massive American trade deficit by the belief that intervention by foreign governments in international markets has given other countries a competitive edge over the United States and by concern about the increase in protectionism among industrial countries In turn major analytical developments in international economics have revolutionized trade theory broadening its scope both by introducing in a more formal manner such concepts as imperfect competition increasing returns product differentiation and learning effects and by including the study of political and economic factors that shape trade policy decisions This collection of papers the result of a conference held by the NBER applies these new trade theories to existing world cases and also presents complementary empirical studies that are grounded in more traditional trade theories The volume is divided into four parts The papers in part 1 consider the problem of imperfect competition empirically assessing the economic effect of various trade policies introduced in industries in which the new trade theory seems to apply Those in part 2 isolate the effects of protection from the influences of the many economic changes that accompany actual periods of protection and also examine how the effects from exogenous changes in economic conditions vary with the form of protection Part 3 provides new empirical evidence on the effect of foreign production by a country s firms on the home country s exports Finally in part 4 two key bilateral issues are analyzed recent U S Japanese trade tensions and the incident involving the threat of the imposition of countervailing duties by the United States on Canadian softwood lumber
