# Study Guide B

## Answer Key

### SECTION 1. THE STUDY OF LIFE

1. Answers should include different land and aquatic environments, as well as the atmosphere.
2. the variety of life on Earth
3. a type of living thing that can interbreed to reproduce
4. Biodiversity is the variety of life (or species) across the biosphere.
5. It increases from the poles to the equator.
6. made up of cells; uses energy and has metabolism; responds to its environment; can reproduce and grow
7. **Cells:** all organisms are made of one or more cells. **Energy and metabolism:** all organisms need energy for chemical processes, called metabolism. **Response to environment:** all organisms respond to physical factors, called stimuli, in their environment. **Reproduction and development:** all organisms must have the ability to reproduce and pass on their genetic material, or DNA, to their offspring.
8. *Bio-* means “life,” and *sphere* means ball-shaped. *Biosphere* means all of the places living things are found on Earth.
9. any individual living thing
10. Metabolism is all of the chemical processes that change substances in an organism.
11. DNA is the genetic material of all organisms, and it is passed on to offspring during reproduction.

### SECTION 2. UNIFYING THEMES OF BIOLOGY

1. an organized group of related parts that interact to form a whole
2. Sample Answers: body systems; an organ
3. Molecules
4. Different types of cells work together to form a system, such as the circulatory system.

5. Organism
6. Different living things interact with each other and with nonliving parts of their environment.
7. Structure refers to shape and arrangement. Function is how something works or what it does.
8. Sample Answer: Cells in the brain have long branching structures that allow them to send messages long distances.
9. the maintenance of constant internal conditions in an organism
10. Homeostasis keeps cells within a range of conditions that allow cells to complete their activities.
11. Students’ answers will vary but should indicate that negative feedback acts to return a condition to normal.
12. the change in living things over time.
13. changes
14. Adaptations
15. ecosystem
16. homeostasis

### SECTION 3. SCIENTIFIC THINKING AND PROCESSES

1. use of senses or tools to study the world
2. answers will vary but could include sketches, counting, measurements, etc.
3. observations that are recorded
4. answers will vary but could include examples of qualitative data (colors, sounds, textures) or quantitative data (numeric measurements)
5. proposed answer to a scientific question that is specific and testable
6. answers will vary but could include any of the hypotheses in the chapter or hypotheses that students develop on their own
7. Statistics show whether a hypothesis is supported or rejected by the data.
8. Other scientists can find weaknesses in a scientific report, and peer review helps to maintain honesty in science.

<b>A Biologist's Guide to Mathematical Modeling in Ecology and Evolution</b> Sarah P. Otto,Troy Day,2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available

**African Exodus** Chris Stringer, Robin McKie, 2015-07-14 A Choice Outstanding Academic Book, A Library Journal Best Sci Tech Book, A New York Times Notable Book. Once in a generation a book such as African Exodus emerges to transform the way we see ourselves. This landmark book, which argues that our genes betray the secret of a single racial stock shared by all of modern humanity, has set off one of the most bitter debates in contemporary science. We emerged out of Africa, the authors contend, less than 100,000 years ago and replaced all other human populations. Employing persuasive fossil and genetic evidence, the proof is in the blood, not just the bones, and an exceptionally readable style. Stringer and McKie challenge long-held beliefs that suggest we evolved separately as different races with genetic roots reaching back two million years.
