

GENETICS: X LINKED GENES

****In fruit flies, eye color is a sex linked trait. Red is dominant to white ****

1. What are the sexes and eye colors of flies with the following genotypes:

$X^R X^r$ Red _____ $X^R Y$ Red _____ $X^r X^r$ white _____
 $X^R X^R$ Red _____ $X^r Y$ White _____

2. What are the genotypes of these flies:

white eyed, male $X^r Y$ red eyed female (heterozygous) $X^R X^r$
 white eyed, female $X^r X^r$ red eyed, male $X^R Y$

3. Show the cross of a white eyed female $X^r X^r$ with a red-eyed male $X^R Y$.

	X^R	X^r
X^r	$X^R X^r$	$X^r X^r$
Y	$X^r Y$	$X^r Y$

4. Show a cross between a pure red eyed female and a white eyed male.

What are the genotypes of the parents: $X^R X^R$ & $X^r Y$

	X^R	X^R
X^r	$X^R X^r$	$X^R X^r$
Y	$X^R Y$	$X^R Y$

How many offspring are:

- white eyed, male 0
- white eyed, female 0
- red eyed, male 50%
- red eyed, female 50%

5. Show the cross of a red eyed female (heterozygous) and a red eyed male. What are the genotypes of the parents? $X^R X^r$ & $X^R Y$

	X^R	X^r
X^R	$X^R X^R$	$X^R X^r$
Y	$X^R Y$	$X^r Y$

How many offspring are:

- white eyed, male 25%
- white eyed, female 0
- red eyed, male 25%
- red eyed, female 50%

Math: What if in the above cross, 100 males were produced and 200 females. How many total red-eyed flies would there be? 250

Females Are Mosaics Barbara Migeon, 2007-03-15 Women can be described as genetic mosaics because they have two distinctly different types of cells throughout their bodies Unlike males who have one X chromosome inherited from their mother females have two X chromosomes in every cell one from each parent The fathers copy works in some cells while the mothers copy works in others These two X chromosomes often function differently especially if one carries a defective gene Much has been written about the Y chromosome and its role in inducing maleness This will be the first book about the X chromosome as a key to female development and the role of X related factors in the etiology of sex differences in human disease Barbara Migeon from the renowned McKusick Nathan Institute at Johns Hopkins is a major figure in clinical genetics and is eminently qualified to write this book and she writes clearly and effectively She describes both the underlying molecular mechanisms and the remarkable genetic consequences of X inactivation and its role in determining the biological concepts characteristic of women Females are Mosaics will be valuable to geneticists biologists and all health professionals interested in women s health

X-Linked Traits James R. Miller, 1990 This book provides a source of information on comparative aspects of mammalian genomes

Statistical Methods for Identifying X-linked Genes Associated with Complex Phenotypes, 2004 Genetic association studies aim to detect association between one or more genetic polymorphisms and complex traits which might be some quantitative characteristic or a qualitative attribute of disease In Chapter 1 we introduce the development of methods for association mapping in the past decades and present the rationale behind our X linked method development Family based association methods have been well developed for autosomes but unique features of X linked markers have received little attention In Chapter 2 we propose a likelihood approach X LRT to estimate genetic risks and test association using a case parents design The method uses nuclear families with a single affected proband and allows additional siblings and missing parental genotypes We also extend X LRT from a single marker test to a multiple marker haplotype analysis Our X LRT offers great flexibility for testing different penetrance relationships within and between sexes In addition estimation of relative risks provides a measure of the magnitude of X linked genetic effects on complex disorders In Chapter 3 and 4 we fill the methodological gaps by developing two approaches X QTL and X HQTL to test association between X linked marker alleles haplotypes and quantitative traits in nuclear family design We adopt the orthogonal decomposition which provides consistent estimates of the additive genetic values of marker alleles haplotypes Joint estimation of the linkage variance component in the association model reduces type I errors to nominal expectations Dosage compensation models provide a simple relationship of X linked additive effects between sexes In Chapter 2 3 and 4 our simulation results demonstrate the validity and substantially higher power of our approaches compared with other existing programs We also apply our methods to MAOA MAOB candidate gene studies of family data
