Quiver Grassmannians of Extended Dynkin Type D Part I: Schubert Systems and Decompositions into Affine Spaces Oliver Lorscheid, Thorsten Weist, 2019-12-02 Let Q be a quiver of extended Dynkin type D_n . In this first of two papers the authors show that the quiver Grassmannian $\text{Gr}_e M$ has a decomposition into affine spaces for every dimension vector e and every indecomposable representation M of defect 1 and defect 0 with the exception of the non Schurian representations in homogeneous tubes. The authors characterize the affine spaces in terms of the combinatorics of a fixed coefficient quiver for M . The method of proof is to exhibit explicit equations for the Schubert cells of $\text{Gr}_e M$ and to solve this system of equations successively in linear terms. This leads to an intricate combinatorial problem for whose solution the authors develop the theory of Schubert systems. In Part 2 of this pair of papers they extend the result of this paper to all indecomposable representations M of Q and determine explicit formulae for the F polynomial of M .

Formality of the Little \mathbb{R} -disks Operad Pascal Lambrechts, Ismar Volić, 2014-06-05 The little disks operad along with its variants is an important tool in homotopy theory. It is defined in terms of configurations of disjoint dimensional disks inside the standard unit disk in \mathbb{R}^n and it was initially conceived for detecting and understanding fold loop spaces. Its many uses now stretch across a variety of disciplines including topology, algebra, and mathematical physics. In this paper the authors develop the details of Kontsevich's proof of the formality of the little disks operad over the field of real numbers. More precisely, one can consider the singular chains on as well as the singular homology of these two objects, which are operads in the category of chain complexes. The formality then states that there is a zig-zag of quasi-isomorphisms connecting these two operads. The formality also, in some sense, holds in the category of commutative differential graded algebras. The authors additionally prove a relative version of the formality for the inclusion of the little disks operad in the little disks operad when $n > 2$.

On the Differential Structure of Metric Measure Spaces and Applications Nicola Gigli, 2015-06-26 The main goals of this paper are: i) To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions. This will be achieved without calling into play any sort of analysis in charts, our assumptions being that the metric space is complete and separable and the measure is Radon and non-negative. ii) To employ these notions of calculus to provide, via integration by parts, a general definition of distributional Laplacian, thus giving a meaning to an expression like $\int \Delta f \phi$ where f is a function and ϕ is a measure. iii) To show that, on spaces with Ricci curvature bounded from below and dimension bounded from above, the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties. This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian, a situation which is analyzed in detail.

Fundamental Solutions and Local Solvability for Nonsmooth Hormander's Operators Marco Bramanti, Luca Brandolini, Maria Manfredini, Marco Pedroni, 2017-09-25 The authors consider operators of the form $\mathcal{L}u = \text{div}(A \nabla u) + b \cdot \nabla u + cu$ in a bounded domain $\Omega \subset \mathbb{R}^n$ where A are nonsmooth Hörmander's vector fields of step s such that the highest order commutators are only Hölder continuous. Applying Levi's parametrix method, the authors construct a local fundamental solution for \mathcal{L} and provide growth estimates for \mathcal{L} and its first derivatives with respect to the vector fields. Requiring the existence of one more derivative of the coefficients, the authors prove that \mathcal{L} also possesses second derivatives and they deduce the local solvability of constructing $\mathcal{L}u = f$ by means of a solution to $\mathcal{L}u = f$ with Hölder continuous f . The authors also prove estimates on this solution.

Degree Spectra of Relations on a Cone Matthew Harrison-Trainor,2018-05-29 Let \mathcal{A} be a mathematical structure with an additional relation R The author is interested in the degree spectrum of R either among computable copies of \mathcal{A} when \mathcal{A} is a natural structure or to make this rigorous among copies of \mathcal{A} R computable in a large degree d He introduces the partial order of degree spectra on a cone and begin the study of these objects Using a result of Harizanov that assuming an effectiveness condition on \mathcal{A} and R if R is not intrinsically computable then its degree spectrum contains all $c \leq d$ degrees the author shows that there is a minimal non trivial degree spectrum on a cone consisting of the $c \leq d$ degrees

Advances in Information Technology Borworn Papasratorn, Kittichai Lavangnananda, Wichian Chutimaskul, Vajirasak Vanijja, 2010-10-19 It was our intention to organize IAIT 2010 as the place where researchers and industrial practitioners could share their work and achievements in information technology both theoretical and in application. This is the fourth time we have organized IAIT to serve as a venue to foster collaboration among industry and academia from different parts of the world. A lot has been achieved since the launch of the first IAIT in 2005; however, many challenges remain to be addressed in the years to come. IAIT 2010 drew attendance from leading professionals in both industry and academia as in IAIT 2009. In addition to the relevant program offered by IAIT 2010, the conference provided an excellent environment to meet peers in the IT profession, build relationships, and exchange lessons learned. During the conference, participants presented and discussed the latest topics in information technology, ranging from technical knowledge and experimentation to future strategic directions. As the Internet continues to reach out even further, almost everything in our daily life is accessible via IP addresses. Our societies need to recognize that we need new knowledge to make this advancement become a benefit to all life in this world. It is almost impossible to gain this new knowledge without contributions from our colleagues working in various aspects of information technology. Some times, new knowledge found in one area can help simplify a difficult task in another. Together, we can make our world better by creating applications from information technology.

A Homology Theory for Smale Spaces Ian F. Putnam, 2014-09-29 The author develops a homology theory for Smale spaces which include the basic sets for an Axiom A diffeomorphism. It is based on two ingredients. The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite-to-one factor map. The second is Krieger's dimension group invariant for shifts of finite type. He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups. The existence of such a theory was proposed by Bowen in the 1970s.

The Fuller Memorandum Charles Stross, 2010-07-06 View our feature on Charles Stross. The Fuller Memorandum National bestselling author Charles Stross brings back Bob Howard, a British super spy with a long-term girlfriend, no fashion sense, and an aversion to martinis. San Francisco Chronicle: Bob Howard is taking a much-needed break from the field to catch up on his filing in The Laundry's archives when a top secret dossier known as The Fuller Memorandum vanishes along with his boss, who the agency's executives believe stole the file. Determined to discover exactly what the memorandum contained, Bob runs afoul of Russian agents, ancient demons, and the apostles of a hideous faith who have plans to raise a very unpleasant undead entity known as the Eater of Souls.

One-Dimensional Empirical Measures, Order Statistics, and Kantorovich Transport Distances Sergey Bobkov, Michel Ledoux, 2019-12-02 This work is devoted to the study of rates of convergence of the empirical measures μ_n on \mathbb{R}^k over a sample X_k of independent identically distributed real-valued random variables towards the common distribution in Kantorovich transport distances W_p . The focus is on finite range bounds on the expected Kantorovich distances $E W_p$ or $E W_{p,p}$ in terms of moments and analytic conditions on the measure and its distribution function. The study describes a variety of rates from the standard $1/n$ to slower rates and both lower and upper bounds on $E W_p$ for fixed n in various instances. Order statistics, reduction to uniform samples, and analysis of beta distributions, inverse distribution functions, log-concavity are main tools in the investigation. Two detailed appendices collect classical and some new facts on inverse distribution functions and beta distributions and their densities necessary to the investigation.

Algebraic Geometry over C^∞ -Rings Dominic Joyce, 2019-09-05 If X is a manifold then the \mathbb{R} algebra $C(X)$ of smooth functions $c: X \rightarrow \mathbb{R}$ is a \mathbb{C} ring That is for each smooth function $f: \mathbb{R}^n \rightarrow \mathbb{R}$ there is an n fold operation $f: C(X)^n \rightarrow C(X)$ acting by $f(c_1, \dots, c_n)$ and these operations f satisfy many natural identities Thus $C(X)$ actually has a far richer structure than the obvious \mathbb{R} algebra structure The author explains the foundations of a version of algebraic geometry in which rings or algebras are replaced by \mathbb{C} rings As schemes are the basic objects in algebraic geometry the new basic objects are \mathbb{C} schemes a category of geometric objects which generalize manifolds and whose morphisms generalize smooth maps The author also studies quasicohherent sheaves on \mathbb{C} schemes and \mathbb{C} stacks in particular Deligne Mumford \mathbb{C} stacks a 2 category of geometric objects generalizing orbifolds Many of these ideas are not new \mathbb{C} rings and \mathbb{C} schemes have long been part of synthetic differential geometry But the author develops them in new directions In earlier publications the author used these tools to define d manifolds and d orbifolds derived versions of manifolds and orbifolds related to Spivak's derived manifolds

Curvature: A Variational Approach A. Agrachev, D. Barilari, L. Rizzi, 2019-01-08 The curvature discussed in this paper is a far reaching generalization of the Riemannian sectional curvature The authors give a unified definition of curvature which applies to a wide class of geometric structures whose geodesics arise from optimal control problems including Riemannian sub Riemannian Finsler and sub Finsler spaces Special attention is paid to the sub Riemannian or Carnot Carathéodory metric spaces The authors construction of curvature is direct and naive and similar to the original approach of Riemann In particular they extract geometric invariants from the asymptotics of the cost of optimal control problems Surprisingly it works in a very general setting and in particular for all sub Riemannian spaces

A Country is Not a Company Paul R. Krugman, 2009 Nobel Prize winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale Economists deal with the closed system of a national economy whereas executives live in the open system world of business Moreover economists know that an economy must be run on the basis of general principles but businesspeople are forever in search of the particular brilliant strategy Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see Since 1922 Harvard Business Review has been a leading source of breakthrough management ideas many of which still speak to and influence us today The Harvard Business Review Classics series now offers readers the opportunity to make these seminal pieces a part of your permanent management library Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world and will have a direct impact on you today and for years to come
