Séances générales tenues en ... par la Société française pour la conservation des monuments historiques Winner of the James Beard Award for Best Beverage Book, Named "Best Drinks Book" by Wine & Spirits magazine, Faiveley International Wine Book of the Year, OIV Best Viticulture Book "A fantastic Christmas present for any wine geek, and one that will provide an endless source of fiendish questions for quiz-setters" —The Guardian An indispensable book for every wine lover, from some of the world's leading wine experts. Where do wine grapes come from and how are grape varieties related to one another? What is the historical background of each one? Where are they grown? What sort of wines do they make? Using cutting-edge DNA analysis and detailing almost 1,400 distinct grape varieties, as well as myriad correct (and incorrect) synonyms, this book examines grapes and wine as never before. Here is a complete, alphabetically presented profile of all grape varieties of relevance to the wine lover, charting the relationships between them and including unique and astounding family trees, their characteristics in the vineyard, and—most important—what the wines made from them taste like. Presented in a stunning design with eight-page gatefolds that reveal the family trees, and a rich variety of full-color illustrations from Viala and Vermorel's century-old classic ampelography, the text will deepen readers' understanding of grapes and wine with every page.

Combining Jancis Robinson's worldview and nose for good writing and good wines with Julia Harding's research, expertise, and attention to detail plus Dr. Vouillamoz's unique level of scholarship, *Wine Grapes* offers essential and original information in greater depth and breadth than has ever been available before. This is a book for wine students, wine experts, and wine lovers everywhere.

Symposium of the Working Group for Succession Research on Permanent Plots, and Data-Processing of the International Society for Vegetation Sciences, Held at Montpellier, France, September 1980 Since the 1970s and particularly the works of Tüxen (1978) and Géhu & Rivas-Martínez (1981), dynamico-catenal phytosociology has facilitated the integration of vegetation dynamics by more precisely describing the trajectories of vegetation series. A national habitat mapping program (CarHAB), launched by France's Ministry of Ecology, aims to map the vegetation and vegetation series of metropolitan France at a scale of 1: 25,000 by 2025. In this context, Corsica has been selected as a pilot region, due to its unique characteristics regarding Mediterranean and alticole vegetation. This book describes in detail the vegetation series and geoseries (ecology, structure, dynamic trajectories, effects of anthropogenic factors on vegetation dynamics, catenal positioning in the landscape) of two Corsican sectors: Cap Corse and Biguglia pond. These two study sites were selected using two methods: • For Cap Corse, the typology and mapping are based on an inductive approach, which seeks to understand the dynamics of vegetation by drawing on the mature, substitutional, pioneering and anthropogenic associations likely to exist within a tessellar envelope. These various dynamic stages characterize "the vegetation series" (sigmetum or synassociation), the fundamental unit of symphytosociology (Géhu 2006; Biondi 2011). The aim of symphytosociology is, therefore, to define the vegetation series; in other words, it seeks to identify the repetitive combinations of syntaxa under homogeneous ecological conditions. • For Biguglia

pond, the typology and mapping are based on a deductive approach, which combines (under SIG) the ecological descriptor maps with the vegetation mapping, in order to reveal the tesselas and the natural potential vegetation that underlies them. Thanks to the improvement of GIS techniques, this approach has been frequently used to characterize plant landscapes from vegetation to vegetation geoseries since the 2000s, with applications to the conservation management of natural and semi-natural environments. The Spink Maury Catalogue has traditionally

provided the highest level of detail for the stamps and covers of France and the French colonies, with thousands of top quality illustrations and prices updated every year. It was acquired by Spink in 2015, and the editors have since endeavoured to make this the premium reference work of its kind. A catalogue made by collectors for collectors. This year the Spink Maury Catalogue, heir to the prestigious Maury, Ceres and Dallay catalogues, continues its work of research, compiled over generations of philately. It covers all French stamps from 1849 to the present day, offering hundreds of changes – with oddities, new varieties and discoveries presented, as always, in an exceptional way. Included in the new material is the continuation of the monographic studies, presenting a stamp per page with all varieties known until the First World War; a redesign of types Merson and Pasteur; and a specialised part devoted to Marianne de Beaujard, reviewed in depth. In addition the section on current usage stamps (TUC) is fully updated following feedback from our contributors and readers. France has one of the most beautiful philatelic legacies in the world, and we are pleased to be its modest ambassador to the numerous international readers who join us each year. “Layout and coverage are sumptuous ... The trite phrase “mine of information” does not begin to do justice to this immense achievement. To any collector of France beyond the elementary stage, this would be a bargain at twice the official retail price ... Highly recommended. ...an absolute must for collectors of French stamps...” Michael Round, Journal of the France & Colonies Philatelic Society

Préparez-vous au choc : falaises vertigineuses qui plongent dans la Méditerranée, villages accrochés à flanc de parois, plages paradisiaques, collines tapissées de châtaigniers et d'oliviers...
