

$$\sin x = 0$$

$$\Rightarrow x = n\pi, n \in \mathbb{I}$$

$$\sin 2x = 0$$

$$\Rightarrow 2x = n\pi$$

$$\Rightarrow x = (n\pi/2), n \in \mathbb{I}$$

$$\sin 3x = 0$$

$$\Rightarrow 3x = n\pi$$

$$\Rightarrow x = (n\pi/3), n \in \mathbb{I}$$

$x = n\pi/2$ does not satisfy the given equation.

Hence, the required solution is $x = n\pi$ and $x = n\pi/3$.

OR

In a triangle, ABC, prove that $\sin A + \sin B + \sin C = 4 \cos A/2 \cos B/2 \cos C/2$

Solution:

In any triangle ABC,

$$A + B + C = \pi$$

$$A + B = \pi - C$$

$$(A + B)/2 = (\pi - C)/2$$

$$(A + B)/2 = (\pi/2) - (C/2)$$

$$\text{LHS} = \sin A + \sin B + \sin C$$

$$= 2 \sin [(A + B)/2] \cos [(A - B)/2] + \sin C$$

$$= 2 \sin [(\pi/2) - (C/2)] \cos [(A - B)/2] + 2 \sin (C/2) \cos (C/2)$$

$$= 2 \cos (C/2) \cos [(A - B)/2] + 2 \sin (C/2) \cos (C/2)$$

$$= 2 \cos (C/2) [\cos [(A - B)/2] + \sin (C/2)]$$

$$= 2 \cos \left(\frac{C}{2} \right) \left\{ \cos \left(\frac{A - B}{2} \right) + \sin \left(\frac{\pi - (A + B)}{2} \right) \right\}$$

$$= 2 \cos \left(\frac{C}{2} \right) \left\{ \cos \left(\frac{A - B}{2} \right) + \sin \left(\frac{\pi}{2} - \frac{A + B}{2} \right) \right\}$$

$$= 2 \cos \left(\frac{C}{2} \right) \left\{ \cos \left(\frac{A - B}{2} \right) + \cos \left(\frac{A + B}{2} \right) \right\}$$

$$= 2 \cos \left(\frac{C}{2} \right) \left\{ 2 \cos \left(\frac{\frac{A - B}{2} + \frac{A + B}{2}}{2} \right) \cos \left(\frac{\frac{A - B}{2} - \frac{A + B}{2}}{2} \right) \right\}$$

$$= 2 \cos (C/2) [2 \cos (A/2) \cos (-B/2)]$$

$$= 4 \cos (A/2) \cos (B/2) \cos (C/2)$$

$$= \text{RHS}$$

Hence proved.

Question 4

Prove that: $5^{2n} - 1$ is divisible by 24 for all $n \in \mathbb{N}$.

Teach Like Finland: 33 Simple Strategies for Joyful Classrooms Timothy D. Walker, 2017-04-18. The best selling book of easy to implement classroom lessons from the world's premier educational system, now available in paperback. Finland shocked the world when its fifteen year olds scored highest on the first Programme for International Student Assessment (PISA), a set of tests evaluating critical thinking skills in math, science, and reading. That was in 2001, even today this tiny Nordic nation continues to amaze. How does Finnish education, with short school days, light homework loads, and little standardized testing, produce students who match the PISA scores of other nations with more traditional work ethic standards? When Timothy Walker started teaching fifth graders at a Helsinki public school, he began a search for the secrets behind the successes of Finland's education system. Highlighting specific strategies that support joyful K-12 classrooms and can be integrated with U.S. educational standards, this book, available in paperback for the first time, gathers what he learned and shows how any teacher can implement many of Finland's best practices. A new foreword by the author addresses the urgent questions of teaching and living in these pandemic times.

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05. Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed, the Enlightenment view of the rational human mind that reasons, makes decisions, and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved.

or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Visible Learning John Hattie,2008-11-19 This unique and ground breaking book is the result of 15 years research and synthesises over 800 meta analyses on the influences on achievement in school aged students It builds a story about the power of teachers feedback and a model of learning and understanding The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning Areas covered include the influence of the student home school curricula teacher and teaching strategies A model of teaching and learning is developed based on the notion of visible teaching and visible learning A major message is that what works best for students is similar to what works best for teachers an attention to setting challenging learning intentions being clear about what success means and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand Although the current evidence based fad has turned into a debate about test scores this book is about using evidence to build and defend a model of teaching and learning A major contribution is a fascinating benchmark dashboard for comparing many innovations in teaching and schools

Mathematics Learning in Early Childhood National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-11-13 Early childhood mathematics is vitally important for young children s present and future educational success Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics Furthermore young children enjoy their early informal experiences with mathematics Unfortunately many children s potential in mathematics is not fully realized especially those children who are economically disadvantaged This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities Improvements in early childhood mathematics education can provide young children with the foundation for school success Relying on a comprehensive review of the research *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children s early mathematics education explores the extent to which they are currently being incorporated in early childhood settings and identifies the changes needed to improve the quality of mathematics experiences for young children This book serves as a call to action to improve the state of early childhood mathematics It will be especially useful for policy makers and practitioners those who work directly with children and their families in shaping the policies that affect the education of young children **Teaching Mathematics Creatively** Linda Pound, Trisha Lee, 2021-09-30 This revised and updated third edition offers a range of strategies activities and ideas to bring mathematics to life in the primary classroom Taking an innovative and playful approach to maths teaching this book promotes creativity as a key element of practice and offers ideas to help your students develop knowledge understanding and enjoyment of the subject In the creative classroom mathematics becomes a tool to build confidence develop problem solving skills and
