students in earth sciences geology and in civil mining and construction engineering to practicing engineers and professionals in these disciplines as well as to all with a general or professional interest in surface and underground excavations

Earthworks Burt G. Look, 2022-09-22 Case studies are used to show how theory is applied in practice In the design and construction process various models are used geotechnical laboratory analytical delivery and economic models as the project is developed from planning to construction This book explores the use and limitations of these earthwork models to be understood and appropriately applied This book evolved from an earthworks course to practicing engineers over a 10 year period Theory alone is not enough Experience alone without relating back to theory can sometimes be misleading if transferred without understanding the fundamentals The book benefited from the experiences of those many practicing engineers and the author's experience in multi disciplinary consulting companies as well as specialist geotechnical companies and government departments The basics of soil rock and compaction mechanics as applied to field conditions are covered Material typically not covered in other textbooks include the applications and limitations of associated standard laboratory and field testing Specific chapters are dedicated to excavation subgrade and expansive clay assessment and treatment Useful design practices as well as the development and application of specifications is covered A specification test or design in one climatic condition or geology may not apply in another

Mineral Property Evaluation Richard L. Bullock, Scott Mernitz, 2017-12-01 Everything sums up what must be considered for a properly documented property evaluation Less than 30% of the projects that are developed in the minerals industry yield the return on investment that was projected from the project feasibility studies The tools described in this handbook will greatly improve the probability of meeting your projections and minimizing project execution capital cost blowout that has become so prevalent in this industry in recent years Mineral Property Evaluation provides guidelines to follow in performing mineral property feasibility and evaluation studies and due diligence and in preparing proper documents for bankable presentations It highlights the need for a consistent systematic methodology in performing evaluation and feasibility work The objective of a feasibility and evaluation study should be to assess the value of the undeveloped or developed mineral property and to convey these findings to the company that is considering applying technical and physical changes to bring the property into production of a mineral product The analysis needs to determine the net present worth returned to the company for investing in these changes and to reach that decision point as early as possible and with the least amount of money spent on the evaluation study All resources are not reserves nor are all minerals an ore The successful conclusion of any property evaluation depends on the development work and conclusions of the project team The handbook has a diverse audience Professionals in the minerals industry that perform mineral property evaluations Companies that have mineral properties and perform mineral property feasibility studies and evaluations or are buying properties based on property evaluation Financial institutions both domestic and overseas that finance or raise capital for the minerals industry Consulting firms and architectural and engineering

contractors that utilize mineral property feasibility studies and need standards to follow And probably the most important the mining and geological engineering students and geology and economic geology students that need to learn the standards that they should follow throughout their careers *Project Independence Blueprint* United States. Federal Energy Administration,1974

Environmental Considerations in Energy Production John R. Craynon,2013 *Environmental Considerations in Energy Production* contains submissions by energy professionals from around the world who discuss a wide selection of topics on energy production including coal mining oil and gas production and electrical power generation as well as the impacts on society and the environment The papers present existing and emerging issues best practices and techniques and appropriate and innovative solutions to meet the present and future challenges of energy production These proceedings contain both complete papers as well as abstracts where a full paper was not warranted The abstracts are included as a resource to readers who may be interested in contacting those individuals The papers range from reviews of work previously completed and discussions of preliminary investigations to thorough reports of research and recommended changes in methodologies and procedures The issues presented show how the environmental impacts of energy production affect community well being and human health
