Sing a Song of Poetry, Grade
K, Revised Edition****

"Play and language are both important learning tools for the prekindergarten child. Through play and language, they learn about their world and about themselves. Play and language are also the most important tools for early literacy learning.

Think of the young child who takes a memo pad and marker around to family members, 'taking orders' for dinner. Like all emergent readers and writers, this child makes no distinction between play and literacy -- both involve curiosity, excitement, learning, and discovery. In *Literacy Beginnings*, Gay Su Pinnell and Irene Fountas bring their characteristically rich, comprehensive, and practical insights to the frontier of early literacy. They show you how to tap into young children's curiosity to introduce them to the world of literacy in joyful, engaging ways. Based on their many experiences in real prekindergarten classrooms

they demonstrate how to: create a classroom community that is play-based, but that also prepares children for the literary-rich world in which they live, promote constructive learning through inquiry, recognize the language and literacy behaviors and understandings that are appropriate instructional goals for preschoolers, use powerful and playful ways to guide children to learn about letters, sounds, and words, [and] support emergent readers and writers through an array of literacy activities"--Back cover. Teaching our children to think and reason mathematically is a challenge, not because students can't learn to think mathematically, but because we must change our own often deeply-rooted teaching habits. This is where instructional routines come in. Their predictable design and repeatable nature support both teachers and students to develop new habits. In Teaching for Thinking, Grace

Kelemanik and Amy Lucenta pick up where their first book, Routines for Reasoning, left off. They draw on their years of experience in the classroom and as instructional coaches to examine how educators can make use of routines to make three fundamental shifts in teaching practice: Focus on thinking: Shift attention away from students' answers and toward their thinking and reasoning Step out of the middle: Shift the balance from teacher-student interactions toward student-student interactions Support productive struggle: Help students do the hard thinking work that leads to real learning With three complete new

routines, support for designing your own routine, and ideas for using routines in your professional learning as well as in your classroom teaching, Teaching for Thinking will help you build new teaching habits that will support all your students to become and see themselves as capable mathematicians.
