

## Chapter 11 Intro to Genetics Test

### Multiple Choice

Identify the letter of the choice that best completes the statement or answers the question.

- Offspring that result from crosses between true-breeding parents with different traits
  - are true-breeding.
  - make up the F<sub>2</sub> generation.
  - make up the parental generation.
  - are called hybrids.
- Mendel concluded that traits are
  - not inherited by offspring.
  - inherited through the passing of factors from parents to offspring.
  - determined by dominant factors only.
  - determined by recessive factors only.
- When Mendel crossed true-breeding tall plants with true-breeding short plants, all the offspring were tall because
  - the allele for tall plants is recessive.
  - the allele for short plants is dominant.
  - the allele for tall plants is dominant.
  - they were true-breeding like their parents.
- In the P generation, a tall plant was crossed with a short plant. Short plants reappeared in the F<sub>2</sub> generation because
  - some of the F<sub>2</sub> plants produced gametes that carried the allele for shortness.
  - the allele for shortness is dominant.
  - the allele for shortness and the allele for tallness segregated when the F<sub>1</sub> plants produced gametes.
  - they inherited an allele for shortness from one parent and an allele for tallness from the other parent.
- The principles of probability can be used to
  - predict the traits of the offspring produced by genetic crosses.
  - determine the actual outcomes of genetic crosses.
  - predict the traits of the parents used in genetic crosses.
  - decide which organisms are best to use in genetic crosses.
- A Punnett square shows all of the following EXCEPT
  - all possible results of a genetic cross.
  - the genotypes of the offspring.
  - the alleles in the gametes of each parent.
  - the actual results of a genetic cross.
- How many different allele combinations would be found in the gametes produced by a pea plant whose genotype was RrYY?
  - 2
  - 4
  - 8
  - 16
- A cross of a white hen with a black rooster produces erminette-color offspring. This type of inheritance is known as
  - incomplete dominance.
  - polygenic inheritance.
  - codominance.
  - multiple alleles.

#### **Strengthening Forensic Science in the United States** National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community performing vitally important work However they are often constrained by lack of adequate resources sound policies and national support It is clear that change and advancements both systematic and scientific are needed in a number of forensic science disciplines to ensure the reliability of work establish enforceable standards and promote best practices with consistent application Strengthening Forensic Science in the United States A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity the National Institute of Forensic Science to

establish and enforce standards within the forensic science community The benefits of improving and regulating the forensic science disciplines are clear assisting law enforcement officials enhancing homeland security and reducing the risk of wrongful conviction and exoneration Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines including upgrading of systems and organizational structures better training widespread adoption of uniform and enforceable best practices and mandatory certification and accreditation programs While this book provides an essential call to action for congress and policy makers it also serves as a vital tool for law enforcement agencies criminal prosecutors and attorneys and forensic science educators

**Sexual Reproduction in Animals and Plants** Hitoshi Sawada,Naokazu Inoue,Megumi Iwano,2014-02-07 This book contains the proceedings of the International Symposium on the Mechanisms of Sexual Reproduction in Animals and Plants where many plant and animal reproductive biologists gathered to discuss their recent progress in investigating the shared mechanisms and factors involved in sexual reproduction This now is the first book that reviews recent progress in almost all fields of plant and animal fertilization It was recently reported that the self sterile mechanism of a hermaphroditic marine invertebrate ascidian is very similar to the self incompatibility system in flowering plants It was also found that a male factor expressed in the sperm cells of flowering plants is involved in gamete fusion not only of plants but also of animals and parasites These discoveries have led to the consideration that the core mechanisms or factors involved in sexual reproduction may be shared by animals plants and unicellular organisms This valuable book is highly useful for reproductive biologists as well as for biological scientists outside this field in understanding the current progress of reproductive biology
