Sheet Metal Forming Processes and Die Design Vukota Boljanovic,2004 This book is a complete modern guide to sheet metal forming processes and die design still the most commonly used methodology for the mass production manufacture of aircraft automobiles and complex high precision parts It illustrates several different approaches to this intricate field by taking the reader through the hows and whys of product analysis as well as the techniques for blanking punching bending deep drawing stretching material economy strip design movement of metal during stamping and tooling

Sheet Metal Design Unigraphics Solutions Inc,1998 A Sheet Metal Design Advisor ,2003 Sheet metal part design relies heavily on manufacturing experience which is not very easily available to the designer The manufacturing experience has to be documented and incorporated in the design process This would eliminate frequent redesign of parts after being assessed as infeasible or costly for manufacture in the design stage Such a DFM analysis would reduce product time to market and reduce overall product costs The present work aims at compiling a comprehensive set of design rules for sheet metal part design and a methodology for implementing inter feature design rule checking for reducing infeasible designs costs and production cycle times The inter feature module is part of a Design Advisory and Feature Extraction system that aims at checking the CAD model for various design rules These rules are incorporated here and implemented for SolidWorks 2000 which has a separate sheet metal modeling module The implementation has been done in Visual Basic using the OLE Interface provided by SolidWorks API
