This book aims to go beyond this narrative and provide an alternative framework to describe the communist past. This reframing is possible thanks to the concepts of generation and gender, which are used in the book as analytical categories in an intersectional overlap. The publication covers twentieth-century Poland, Czechoslovakia/Czech Republic, the Soviet Union/Russia, former Yugoslavia, Turkish communities in West Germany, Italy, and Cuba (as a comparative point of reference). It provides a theoretical frame and overview chapters on several important gender and generation narratives about communism, anticommunism, and postcommunism. Its starting point is the belief that although methodological reflection on communism, as well as on generations and gender, is conducted extensively in contemporary research, the overlapping of these three terms is still rare. The main focus in the first part is on methodological issues. The second part features studies which depict the possibility of generational-gender interpretations of history. The third part is informed by biographical perspectives. The last part shows how the problem of generations and gender is staged via the medium of literature and how it can be narrated. This book constitutes the refereed post-conference proceedings of the 10th EAI International Conference on ArtsIT, Interactivity and Game Creation, ArtsIT 2021 which was held in December 2021. Due to COVID-19 pandemic the conference was held virtually. The 31 revised full papers presented were carefully selected from 57 submissions. The papers are thematically arranged in the following sections: Media Arts and Virtual Reality; Games; Fusions; Collaboration, Inclusion and Participation; Artificial Intelligence in Art and Culture; Approaches and Applications. This book is designed to guide the dental practitioner in the medical and surgical management of the oral surgery patient. It provides dentists and dental professionals with up-to-date, evidence-based information on how to handle any oral surgical problem and how to work up a patient. The book is divided into five sections, the first two of which present overviews of general and basic perioperative topics and the principles of exodontia. Management of oral pathology is then discussed in detail, covering odontogenic infections, osteonecrosis, preprosthetic surgery, common oral pathology, biopsy techniques, and dentoalveolar trauma. The fourth section is devoted to topics in advanced oral surgery, such as disturbances of the temporomandibular joint apparatus, facial deformities, and dental implants. Finally, a series of illustrative case reports and unusual surgical cases is presented. The book is multi-institutional and multispecialty based. Both editors have extensive academic experience and have authored numerous scientific publications. This book constitutes the refereed proceedings of the 24th International Conference on DNA Computing and Molecular Programming, DNA 24, held in Jinan, China, in October 2018. The 12 full papers presented were carefully selected from 14 submissions.

Research in DNA computing aims to draw together mathematics, computer science, physics, chemistry, biology, and nanotechnology to address the analysis, design, and synthesis of information-based molecular systems. The papers were sought in all areas related to biomolecular computing, including: algorithms and models for computation on biomolecular systems; computational processes in vitro and in vivo; molecular switches, gates, devices, and circuits; molecular folding and self-assembly of nanostructures; analysis and theoretical models of laboratory techniques; molecular motors and molecular robotics; information storage; studies of fault tolerance and error correction; software tools for analysis, simulation, and design; synthetic biology and in vitro evolution; and applications in engineering, physics, chemistry, biology, and medicine. An investigation into experiences of other realms of existence and contact with otherworldly beings • Examines how contact with alien life-forms can be obtained through the “inner space” dimensions of our minds • Presents evidence that other worlds experienced through consciousness-altering technologies are often as real as those perceived with our five senses • Correlates science fiction’s imaginal realms with psychedelic research For thousands of years, voyagers of inner space--spiritual seekers, shamans, and psychoactive drug users--have returned from their inner imaginal travels reporting encounters with alien intelligences. Inner Paths to Outer Space presents an innovative examination of how we can reach these other dimensions of existence and contact otherworldly beings. Based on their more than 60 combined years of research into the function of the brain, the authors reveal how psychoactive substances such as DMT allow the brain to bypass our five basic senses to unlock a multidimensional realm of existence where otherworldly communication occurs. They contend that our centuries-old search for alien life-forms has been misdirected and that the alien worlds reflected in visionary science fiction actually mirror the inner space world of our minds. The authors show that these “alien” worlds encountered through altered states of human awareness, either through the use of psychedelics or other methods, possess a sense of reality as great as, or greater than, those of the ordinary awareness perceived by our five senses. A TURNING POINT IN PSYCHOLOGY AND HUMAN HISTORY Stanislav Grof, M.D., formerly a professor at Johns Hopkins University School of Medicine and founder of the International Transpersonal Association, has written many books, including *Realms of the By* Richard Evans Schultes, Harvard University, Cambridge, Massachusetts, and Albert Hofmann, Basel, Switzerland. With Forewords by I. Newton Kugelmass and Henrich Kluver. The Second Edition of this book encompasses all of the advances that have been made in this field since publication of the original text. Newly discovered hallucinogenic plants have been incorporated into the discussions along with new information on some well-known drugs. The authors continue to focus on the botany and chemistry of hallucinogens, although they also consider ethnobotanical, historical, pharmacological and psychological aspects. Initial chapters delineate definition, botanical distribution, and structural types of hallucinogenic plants. Plants of known, possible and dubious hallucinogenic potential are then covered in separate sections. The bibliography for this new edition has been enlarged to accommodate all of the recent activity in botanical and chemical investigation of psychoactive plants. Readers will also appreciate the excellent illustrations that accompany the text. Many of the common dental diseases are behavioral in origin, and are affected by individual lifestyles. Health promotion is therefore at the heart of preventing and controlling dental ill health. Helping people to understand that they can influence whether they have good or bad teeth is of prime importance. This book presents theoretical and practical advice on a broad range of topics encompassed by the term "health promotion". It includes models and theories of health behavior, influence of social factors on oral health promotion, government health policies, health education in specific settings, national campaigns, and evaluation of interventions. The historical background to health education and promotion is also discussed. The international roster of contributors provides a diverse set of topics. The book covers the complete range of health promotion activity. The comprehensive contents list will help readers and dental health professionals to target the sections of particular interest. Other health professionals will find the oral health promotion model useful when considering strategies for public health policy in other disciplines. Published since 1959, *International Review of Neurobiology* is a well-known series appealing to neuroscientists, clinicians, psychologists, physiologists, and pharmacologists. Led by an internationally renowned editorial board, this important serial publishes both eclectic volumes made up of timely reviews and thematic volumes that focus on recent progress in a specific area of neurobiology research. This volume is a collection of articles

covering recent advances in the field of neurobiology. Topics covered include chromosome 22 deletion syndrome and schizophrenia; characterization of proteome of human cerebrospinal fluid; hormonal pathways regulating intermale and interfemale aggression; neuronal gap junctions; effects of genes and stress on the neurobiology of depression; quantitative imaging with the MicroPET small-animal PET tomograph; understanding myelination through studying its evolution.
