Mike Busch on Engines Mike Busch, Mike Busch A&P/IA, 2018-05-12 The risk of engine failure is greatest when your engine is young NOT when it's old You should worry more about pediatrics than geriatrics Mike Busch A P IA Mike Busch on Engines expands the iconoclastic philosophy of his groundbreaking first book Manifesto to the design operation condition monitoring maintenance and troubleshooting of piston aircraft engines Busch begins with the history and theory of four stroke spark ignition engines He describes the construction of both the top end cylinders and bottom end inside the case and functioning of key systems lubrication ignition carburetion fuel injection turbocharging He reviews modern engine leaning technique which your POH probably has all wrong and provides a detailed blueprint for maximizing the life of your engine The second half presents a 21st century approach to health assessment maintenance overhaul and troubleshooting Busch explains how modern condition monitoring tools like borescopy oil analysis and digital engine monitor data analysis allow you to extend engine life and overhaul strictly on condition rather than an arbitrary TBO The section devoted to troubleshooting problems like rough running high oil consumption temperamental ignition and turbocharging issues is worth its weight in gold If you want your engine to live long and prosper you need this book

Major Piston Aero-engines of World War II Victor F. Bingham,1998

The frenzy of technological invention and improvement that accompanied each large scale conflict during the twentieth century has been one of the most important factors in driving the spectacular scientific advances made during the last hundred years The half way point of the century saw the horrors of the first truly global battle World War II At that time the piston aero engine was at its zenith and the world s airforces were almost entirely propeller driven It is a period that provides the most interesting study of these engines and the aircraft they powered because the rapid change to turbojets that occurred in the post war era saw the demise of the piston engine on almost all types of military aircraft and large airliners This book looks at the design and development of the most famous engines used by the combatants during this great air war Each type is studied and evaluated in historical perspective and many famous aircraft are illustrated to demonstrate installation and differing usage One Merlin makes a Spitfire two a Mosquito and four a Lancaster Engines made in America Russia and Germany could boast the same versatility and are described here in detail
