Linguistics: An Introduction to Linguistic Theory is a textbook, written for introductory courses in linguistic theory for undergraduate linguistics majors and first-year graduate students. Twelve major figures in the field bring their expertise to each of the core areas of the field - morphology, syntax, semantics, phonetics, phonology, and language acquisition. In each section the book is concerned with discussing the underlying principles common to all languages, showing how these are revealed in language acquisition and in the specific grammars of the world's languages. Theoretical concepts are introduced through the analysis of a wide set of language data from Arabic to Zulu. The student will learn how to do linguistics by working through real linguistic data. Each section explains how to define and solve a problem; organizes the data into paradigms revealing the structured patterns in the data; formulates generalizations based on these patterns; proposes rules or principles to account for the generalization; seeks independent evidence in its argument for the proposed

theoretical construct. The book brings the latest developments in theoretical linguistics to bear in its discussion of the traditional issues. It covers these subjects in greater depth than is found in most introductory texts permitting the student to proceed directly, after using this text, to graduate courses in the field. It contains problems, a glossary, and a bibliography for further reading. Linguistics is supported by an instructor's manual. If you want to set a solid foundation in math, grasping the techniques on solve word problems is the key to it. This set of books teach you the techniques and strategies you will need to solve word problems. Sample question:93. Peter has read 120 pages of a book that he has just borrowed from the library. If the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet, how many pages does the book have? Reasoning and solution: From “the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet”, we know that the number of pages he has not read yet (the noun phrase after the word “than”) is the amount in 1 whole and the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than the fractional part the number of pages he has not read yet is in, 1, so the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than 1 or is $(1-\frac{2}{5})$ or is $\frac{3}{5}$ of 1 whole. He has read 120 pages so we divide $\frac{3}{5}$ into the amount in it, 120, to find the amount in 1 whole, the number of pages he has not read yet: $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$ pages The number of pages that he has not read is 200 pages. ...The techniques and strategies on using algebraic equations to solve word problems and on solving proportions, surface area, volume and area of lateral surface of cylinders and cones are also reviewed in the book. This book also reviews on using one set of 3 elements formulas and 2 sets of 3 elements formulas to solve whole number word problems, decimal word problems and fraction word problems. Detailed explanations of the reasoning and solving strategies for each and every problem are given in the book.
