

MAKING A MODEL OF DNA INSTRUCTIONS

- 1) Colour the individual structures on the worksheet as follows:

adenine = red
guanine = blue
phosphate = brown

thymine = green
cytosine = yellow
deoxyribose = purple

- 2) Cut out each structure.
- 3) Using the small symbols (squares, circles and stars) on the structures as guides, line up the bases, phosphates and sugars.
- 4) Glue the appropriate pairs together to form nucleotides.
- 5) Construct the right side of your DNA molecule by putting together in sequence a cytosine, thymine, guanine and adenine nucleotide.
- 6) Complete the left side of the DNA ladder by adding complementary nucleotides or nucleotides that fit. Your finished model should resemble a ladder.
- 7) To show replication of your model, separate the left side from the right side on your desk, leaving a space of about 15 to 20 cm.
- 8) Using the remaining nucleotides, add to the left side of the model to build a new DNA molecule. Do the same with the separated right side.
- 9) Tape or glue the nucleotides together to form two complete identical DNA ladders or molecules.
- 10) Answer the following questions.

The Double Helix James D. Watson, 1969-02 Since its publication in 1968 The Double Helix has given countless readers a rare and exciting look at one highly significant piece of scientific research Watson and Crick s race to discover the molecular structure of DNA Molecular Biology of the Cell ,2002 **Blueprint, with a new afterword** Robert Plomin, 2019-07-16 A top behavioral geneticist makes the case that DNA inherited from our parents at the moment of conception can predict our psychological strengths and weaknesses In Blueprint behavioral geneticist Robert Plomin describes how the DNA revolution has made DNA personal by giving us the power to predict our psychological strengths and weaknesses from birth A century of genetic research shows that DNA differences inherited from our parents are the consistent lifelong sources of our psychological individuality the blueprint that makes us who we are Plomin reports that genetics explains more about the psychological differences among people than all other factors combined Nature not nurture is what makes us who we are Plomin explores the implications of these findings drawing some provocative conclusions among them that parenting styles don t really affect children s outcomes once genetics is taken into effect This book offers readers a unique insider s view of the exciting synergies that came from combining genetics and psychology The paperback edition has a new afterword by the author Molecular Structure of Nucleic Acids ,1953 Probability Models for DNA Sequence Evolution Rick

Durrett,2013-03-09 What underlying forces are responsible for the observed patterns of variability given a collection of DNA sequences In approaching this question a number of probability models are introduced and anyalyzed Throughout the book the theory is developed in close connection with data from more than 60 experimental studies that illustrate the use of these results

Life's Greatest Secret Matthew Cobb, 2015-07-07 Everyone has heard of the story of DNA as the story of Watson and Crick and Rosalind Franklin but knowing the structure of DNA was only a part of a greater struggle to understand life s secrets Life s Greatest Secret is the story of the discovery and cracking of the genetic code the thing that ultimately enables a spiraling molecule to give rise to the life that exists all around us This great scientific breakthrough has had farreaching consequences for how we understand ourselves and our place in the natural world and for how we might take control of our and life s future Life s Greatest Secret mixes remarkable insights theoretical dead ends and ingenious experiments with the swift pace of a thriller From New York to Paris Cambridge Massachusetts to Cambridge England and London to Moscow the greatest discovery of twentieth century biology was truly a global feat Biologist and historian of science Matthew Cobb gives the full and rich account of the cooperation and competition between the eccentric characters mathematicians physicists information theorists and biologists who contributed to this revolutionary new science And while every new discovery was a leap forward for science Cobb shows how every new answer inevitably led to new questions that were at least as difficult to answer just ask anyone who had hoped that the successful completion of the Human Genome Project was going to truly yield

the book of life or that a better understanding of epigenetics or junk DNA was going to be the final piece of the puzzle But the setbacks and unexpected discoveries are what make the science exciting and it is Matthew Cobb's telling that makes them worth reading This is a riveting story of humans exploring what it is that makes us human and how the world works and it is essential reading for anyone who'd like to explore those questions for themselves
