The Cultural Origins of Human Cognition Michael Tomasello, 2015-08-01 Ambitious and elegant this book builds a bridge between evolutionary theory and cultural psychology Michael Tomasello is one of the very few people to have done systematic research on the cognitive capacities of both nonhuman primates and human children The Cultural Origins of Human Cognition identifies what the differences are and suggests where they might have come from Tomasello argues that the roots of the human capacity for symbol based culture and the kind of psychological development that takes place within it are based in a cluster of uniquely human cognitive capacities that emerge early in human ontogeny These include capacities for sharing attention with other persons for understanding that others have intentions of their own and for imitating not just what someone else does but what someone else has intended to do In his discussions of language symbolic representation and cognitive development Tomasello describes with authority and ingenuity the ratchet effect of these capacities working over evolutionary and historical time to create the kind of cultural artifacts and settings within which each new generation of children develops He also proposes a novel hypothesis based on processes of social cognition and cultural evolution about what makes the cognitive representations of humans different from those of other primates Lucid erudite and passionate The Cultural Origins of Human Cognition will be essential reading for developmental psychology animal behavior and cultural psychology

Architecture from the Outside Elizabeth Grosz, 2001-06-22 Essays at the intersection of philosophy and architecture explore how we understand and inhabit space To be outside allows one a fresh perspective on the inside In these essays philosopher Elizabeth Grosz explores the ways in which two disciplines that are fundamentally outside each another architecture and philosophy can meet in a third space to interact free of their internal constraints Outside also refers to those whose voices are not usually heard in architectural discourse but who inhabit its space the destitute the homeless the sick and the dying as well as women and minorities Grosz asks how we can understand space differently in order to structure and inhabit our living arrangements accordingly Two themes run throughout the book temporal flow and sexual specificity Grosz argues that time change and emergence traditionally viewed as outside the concerns of space must become more integral to the processes of design and construction She also argues against architecture s historical indifference to sexual specificity asking what the existence of at least two sexes has to do with how we understand and experience space Drawing on the work of such philosophers as Henri Bergson Roger Caillois Gilles Deleuze Jacques Derrida Luce Irigaray and Jacques Lacan Grosz raises abstract but nonformalistic questions about space inhabitation and building All of the essays propose philosophical experiments to render space and building more mobile and dynamic

Summa Technologiae Stanisław Lem, 2013-03-01 The Polish writer Stanislaw Lem is best known to English speaking readers as the author of the

1961 science fiction novel *Solaris* adapted into a meditative film by Andrei Tarkovsky in 1972 and remade in 2002 by Steven Soderbergh Throughout his writings comprising dozens of science fiction novels and short stories Lem offered deeply philosophical and biting satirical reflections on the limitations of both science and humanity In *Summa Technologiae* his major work of nonfiction first published in 1964 and now available in English for the first time Lem produced an engaging and caustically logical philosophical treatise about human and nonhuman life in its past present and future forms After five decades *Summa Technologiae* has lost none of its intellectual or critical significance Indeed many of Lem's conjectures about future technologies have now come true from artificial intelligence bionics and nanotechnology to the dangers of information overload the concept underlying Internet search engines and the idea of virtual reality More important for its continued relevance however is Lem's rigorous investigation into the parallel development of biological and technical evolution and his conclusion that technology will outlive humanity Preceding Richard Dawkins's understanding of evolution as a blind watchmaker by more than two decades Lem posits evolution as opportunistic shortsighted extravagant and illogical Strikingly original and still timely *Summa Technologiae* resonates with a wide range of contemporary debates about information and new media the life sciences and the emerging relationship between technology and humanity
