**On Their Own Terms** Benjamin A. Elman,2009-07-01 In On Their Own Terms Benjamin A Elman offers a much needed synthesis of early Chinese science during the Jesuit period 1600 1800 and the modern sciences as they evolved in China under Protestant influence 1840s 1900 By 1600 Europe was ahead of Asia in producing basic machines such as clocks levers and pulleys that would be necessary for the mechanization of agriculture and industry In the seventeenth and eighteenth centuries Elman shows Europeans still sought from the Chinese their secrets of producing silk fine textiles and porcelain as

well as large scale tea cultivation Chinese literati borrowed in turn new algebraic notations of Hindu Arabic origin Tychonic cosmology Euclidian geometry and various computational advances Since the middle of the nineteenth century imperial reformers early Republicans Guomindang party cadres and Chinese Communists have all prioritized science and technology In this book Elman gives a nuanced account of the ways in which native Chinese science evolved over four centuries under the influence of both Jesuit and Protestant missionaries In the end he argues the Chinese produced modern science on their own terms

**A Fuller Explanation** Amy C. Edmondson,2012-12-06 In a broad sense Design Science is the grammar of a language of images rather than of words Modern communication techniques enable us to transmit and reconstitute images without the need of knowing a specific verbal sequential language such as the Morse code or Hungarian International traffic signs use international image symbols which are not specific to any particular verbal language An image language differs from a verbal one in that the latter uses a linear string of symbols whereas the former is multidimensional Architectural renderings commonly show projections onto three mutually perpendicular planes or consist of cross sections at different altitudes representing a stack of floor plans Such renderings make it difficult to imagine buildings containing ramps and other features which disguise the separation between floors consequently they limit the creativity of the architect Analogously we tend to analyze natural structures as if nature had used similar stacked renderings rather than for instance a system of packed spheres with the result that we fail to perceive the system of organization determining the form of such structures
