This is the answer key of Volume 6 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume:Mr. Coach spent a total of \$240.00 for 6 soccer balls. If one basketball cost \$ 13.00 more than one soccer, how much did he pay for 12 basketballs? Reasoning and solution:To find how much he paid for 12 basketballs, we need to first know how much one basketball cost. To know how much one basketball cost, we need to know how much one soccer ball cost first. 6 soccer balls cost \$240.00. Each of the 6 soccer balls costs the same so we can use the 3 elements formulas to solve the problem: divide the number of soccer balls or the number of groups, 6, into the total amount, 240, to find the amount in one group or how much each soccer ball costs: $240 \div 6 = \$40.00$ Since one basketball cost \$13 more than one soccer ball we add 13 to the cost of one soccer ball to find the cost of one basketball: $13 + 40 = \$53.00$ One basketball costs \$53.00 so 12 of them cost 12 groups of \$53.00. Each basketball costs the same so we can use the 3 elements formulas to solve the problem: We multiply the number of groups, 12, and the amount in each group, 53, to find the total amount in all the groups or the total cost of 12 basketballs: $12 \times 53 = \$636.00$ The techniques on using the 3 elements formulas to find the total amount in all the groups, the number of groups, and the amount in each group are reviewed and reinforced in this volume. The volume also reinforces the techniques on using the multiplication and division equations to solve word problems. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 6 are given in this book. This is the answer key of Volume 5 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: An elephant weighs as much as 8 cows; a cow weighs as much as 2 horses. If each horse weighs 500 pounds, how much does an elephant weigh? Reasoning and solution: To find the weight of the elephant, we need to first get the weight of 1 cow; to find the weight of 1 cow, we need to know the weight of 1 horse. One horse weighs 500 pounds. One cow weighs as much as 2 horses so when we find the weight of 2 horses, we will know the weight of one cow. One horse weighs 500 pounds, so 2 of them weigh 2 groups of 500 pounds. We multiply the number of horses, 2, with the weight of 1 horse, to find the weight of 2 horses: $2 \times 500 = 1,000$ pounds One cow weighs 1,000 pounds. An elephant weighs as much as 8 cows. One cow weighs 1,000 pounds so 8 of them weigh 8 groups of 1,000 pounds. We multiply the number of cows, 8, with the weight of one cow, 1000 pounds, to find the weight of 8 cows: $8 \times 1000 = 8,000$ pounds Since 1 elephant weighs as much as 8 cows, 1 elephant weighs 8,000 pounds. The techniques on using the 3 elements formulas to find the total amount in all the groups, the number of groups, and the amount in each group are reviewed and reinforced in this volume. The volume also reviews and reinforces the techniques on addition and subtraction. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 5 are given in this book. If you want to set a solid foundation in math, grasping the techniques on solve word problems is the key to it. This set of books teach you the techniques and strategies you will need to solve word problems. Sample question:93. Peter has read 120 pages of a book that he has just borrowed from the library. If the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet, how many pages does the book have? Reasoning and solution: From "the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet", we know that the number of pages he has not read yet (the noun phrase after the word "than") is the amount in 1 whole and the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than the fractional part the number of pages he has not read yet is in, 1, so the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than 1 or is $(1-\frac{2}{5})$ or is $\frac{3}{5}$ of 1 whole. He has read 120 pages so we divide $\frac{3}{5}$ into the amount in it, 120, to find the amount in 1 whole, the number of pages he has not read yet: $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$ pages The number of pages that he has not read is 200 pages. ...The techniques and strategies on using algebraic equations to solve word problems and on solving proportions, surface area, volume and area of lateral surface of cylinders and cones are also reviewed in the book. This book also reviews on using one set of 3 elements formulas and 2 sets of 3 elements formulas to solve whole number word problems, decimal word problems and fraction word problems. In subseq This is the answer key of Volume 8 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: A lion can live up to 40 years and an elephant can live twice as long. If a sea turtle can live 20 years more than twice as long as the elephant, how many years can the sea turtle live up to? Reasoning and solution: Twice= 2 groups of so we can use the 3 elements formulas to solve for one of the elements: An elephant can live twice as long "as a lion (40 years)" so the number of years that a lion can live to is the amount in 1 group; the number of groups is 2. We multiply the number of groups, 2, with the amount in each group, 40 years, to find the total amount in the groups or the number of years that the elephant can live up to: $2 \times 40 = 80$ years A sea turtle can live up to 20 years more than twice as long as the elephant: We need to first find the amount that is twice as much as the elephant's age. The amount in 1 group is the age of the elephant, the number of groups is 2. Twice= 2 groups of so we can use the 3 elements formulas to solve for one of the elements: We multiply the number of groups, 2, with the amount in each group, 80, to find total amount in the groups: $2 \times 80 = 160$ years Secondly, we need to find 20 years more than twice as long as the elephant (160 years) or 20 years more than 160 years. We add 20 to 160 to find the number of years that the sea turtle can live up to: $20 + 160 = 180$ years The techniques and strategies on using the addition and subtraction reasoning and the 3 elements formulas to solve decimal word problems, on using algebra to solve word problems, and on finding the measures of internal angles in triangles are also covered in this volume. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 8 are given in this book. This book is an amazing resource for teachers who are struggling to help students develop both procedural fluency and conceptual understanding. --Dr. Margaret (Peg) Smith, co-author of 5 Practices for Orchestrating Productive Mathematical Discussions Robert Kaplinsky, the co-creator of Open Middle math problems, brings his new class of tasks designed to stimulate deeper thinking and lively discussion among middle and high school students in Open Middle Math: Problems That Unlock Student Thinking, Grades 6-12. The problems are characterized by a closed beginning,- meaning all students start with the same initial problem, and a closed end,- meaning there is only one correct or optimal answer. The key is that the middle is open- in the sense that there are multiple ways to approach and ultimately solve the problem. These tasks have proven enormously popular with teachers looking to assess and deepen student understanding, build student stamina, and energize their classrooms. Professional Learning Resource for Teachers: Open Middle Math is an indispensable resource for educators interested in teaching student-centered mathematics in middle and high schools consistent with the national and state standards. Sample Problems at Each Grade: The book demonstrates the Open Middle concept with sample problems ranging from dividing fractions at 6th grade to algebra, trigonometry, and calculus. Teaching Tips for Student-Centered Math Classrooms: Kaplinsky shares guidance on choosing problems, designing your own math problems, and teaching for multiple purposes, including formative assessment, identifying misconceptions, procedural fluency, and conceptual understanding. Adaptable and Accessible Math: The tasks can be solved using various strategies at different levels of sophistication, which means all students can access the problems and participate in the conversation. Open Middle Math will help math teachers transform the 6th -12th grade classroom into an environment focused on problem solving, student dialogue, and critical thinking. Spectrum(R) Word Problems for grade 7 includes practice for essential math skills, such as real world applications, multi-step word problems, variables, ratio and proportion, perimeter, area and volume, percents, statistics and more. Spectrum(R) Word Problems supplement to classroom work and proficiency test preparation. The series provides examples of how the math skills students learn in school apply to everyday life with challenging, multi-step word problems. It features practice with word problems that are an essential part of the Common Core State Standards. Word problem practice is provided for essential math skills, such as fractions, decimals, percents, metric and customary measurement, graphs and probability, and preparing for algebra and more.
