FUNDAMENTALS OF COMPUTERS Feb 06 2022 The sixth edition of the highly acclaimed “Fundamentals of Computers” lucidly presents how a computer system functions. Both hardware and software aspects of computers are covered. The book begins with how numeric and character data are represented in a computer, how various input and output units function, how different types of memory units are organized, and how data is processed by the processor. The interconnection and communication between the I/O units, the memory, and the processor is explained clearly and concisely. Software concepts such as programming languages, operating systems, and communication protocols are discussed. QoS for Fixed and Mobile Ultra-Broadband Mar 10 2022 Provides extensive coverage of standardized QoS technologies for fixed and mobile ultra-broadband networks and services—bringing together technical, regulation, and business aspects The Quality of Service (QoS) has been mandatory for traditional telecommunication services such as telephony (voice) and television (TV) since the first half of the past century, however, with the convergence of telecommunication networks and services onto Internet technologies, the QoS provision remains a big challenge for all ICT services, not only for traditional ones. This book covers the standardized QoS technologies for fixed and mobile ultra-broadband networks and services, including the business aspects and QoS regulation framework, which all will have high impact on the ICTs in the current and the following decade. QoS for Fixed and Mobile Ultra-Broadband starts by introducing readers to the telecommunications field and the technology, and the many aspects of both QoS and QoE (Quality of Experience). The next chapter devotes itself to Internet QoS, starting with an overview of numerous technology protocols and finishing with business and regulatory aspects. The

next three chapters look at QoS in NGN and Future Networks, QoS for fixed ultra-broadband, and QoS for mobile ultra-broadband. The book also provides readers with in-depth accounts of services in fixed and mobile ultra-broadband; broadband QoS parameters, KPIs, and measurements; network neutrality; and the QoS regulatory framework. Comprehensively covers every aspect of QoS technology for fixed and mobile ultra-broadband networks and services, including the technology, the many regulations, and their applications in business Explains how the QoS is transiting from the traditional telecom world to an all-IP world Presents all the fundamentals of QoS regulation, as well as SLA regulation QoS for Fixed and Mobile Ultra-Broadband is an excellent resource for managers, engineers, and employees from regulators, ICT government organizations, telecommunication companies (operators, service providers), ICT companies, and industry. It is also a good book for students and professors from academia who are interested in understanding, implementation, and regulation of QoS for fixed and mobile ultra-broadband.

Avatars, Activism and Postdigital Performance Apr 22 2023 In the context of the postdigital age,
where technology is increasingly part of our social and political world, *Avatars, Activism and
Postdigital Performance* traces how identity can be created, developed, hijacked, manipulated,
sabotaged and explored through performance in postdigital cultures. Considering how technology is
reshaping performance, this timely collection reveals how we engage in performance practices
through expanded notions of intermediality, knotted networks and layering. This book examines the
artist as activist and producer of avatars, and how digital doubles, artificial intelligence and semi-

automated politics are problematizing and expanding our discussions of identity. Using a range of examples in theatre, film and internet-based performance practices, chapters examine the uncertain boundaries of networked 'informational selves' in mediatized cultures, the impacts of machine algorithms, apps and the consequences of digital legacies. Case studies include James Cameron's *Avatar*, Blast Theory's *Karen*, Ontroerend Goed's *A Game of You*, Randy Rainbow's online videos, Sisters Grimm's *Calpurnia Descending*, Dead Centre's *Lippy* and Chekhov's *First Play* and Jo Scott's practice-as-research in 'place-mixing'. This is an incisive study for scholars, students and practitioners interested in the wider conversations around identity-formation in postdigital cultures.
