Manual of Wireless Telegraphy Jul 03 2021 Excerpt from Manual of Wireless Telegraphy: For the Use of Naval Electricians This manual, first published in January, 1907, was revised in 1909 by L. W. Austin, Ph. D. The present (2d) revision contains the results of some of Dr. Austin's later researches as well as more detailed instructions relative to installation, care and operation, also additional appendices, containing extracts from Service Regulations adopted at the International Wireless Telegraph Convention in Berlin, October, 1906, and the U. S. Statute of 1910, relative to wireless telegraph apparatus on merchant vessels. The author is also indebted to Mr. J. Martin, of the Navy Yard, New York; Mr. Geo. F. Hanscom, of the Navy Yard, Mare Island; Mr. Geo. B. Clark and others for figures, illustrations and suggestions. A Manual of Telephony (Classic Reprint) Jul 15 2022 Excerpt from A Manual of Telephony In November, 1888, was published one of the volumes of the Specialists Series, entitled The Telephone, the authors being W.H. Preece and Julius Maier, Ph.D. The reception extended to this work was of the most gratifying character; but the rapid strides made in practical telephony since that time, together with the fact that Dr. Maiers services were no longer available, led to the decision that the original volume should not be re-issued, but should be replaced by the present work. We desire here to recognise and acknowledge the use that we have made of Dr. Maiers previous labours, particularly in connection with the earlier portions of this book, which deal principally with historical telephony. No slight difficulty has been experienced in determining what information should be given and what excluded. As, on the one hand a minute and particular description of all conditions is unnecessary for the experienced specialist; so, on the other hand, the neglect of minor details may lead to very great inconvenience to others who, in isolated districts, wish to avail themselves of the fruits of the labours of their more favoured colleagues. We have spared no pains to secure such due proportion in the descriptions of the various apparatus and systems as shall meet the wants of both these classes. An Elementary Manual of Radiotelegraphy and Radiotelephony Jan 21 2023 Excerpt from An Elementary Manual of Radiotelegraphy and Radiotelephony: For Students and Operators The Author published in 1906, through Messrs. Longmans, Green and Co., a volume on the Principles of Electric Wave Telegraphy and Telephony, in which an attempt was made to provide a fairly complete treatment of the subject, not limited to mere descriptions of various so-called systems of wireless telegraphy, but explanatory of the scientific principles underlying Radiotelegraphy in general. It was, however, represented to him that a smaller manual on the subject, suitable for the use of students, practical operators, and the general reader, on the same lines, but somewhat more elementary, might meet with acceptance. The Author has, therefore, endeavoured to put together in the present volume the information most likely to be of use for this purpose. Where it has been deemed advisable to introduce some little mathematical reasoning to supplement the verbal descriptions, it is limited to the use of simple operations and expressions. For the proof of many of the formulæ given in this Manual, which require rather more extended mathematical discussion than can be given here, the reader must be referred to the Author's larger book above mentioned. It is assumed, however, that any user of this Manual has a general acquaintance with the elementary facts of electrical science.
