This edition involves students with financial statements by using real-world examples. It builds skills in analysing real financial reports through statements, exhibits, and cases of actual companies. The aim of the book is to give non-accounting students a basic ability and confidence to read and use financial accounting reports and statements within their business or financial specialties. Many employees in business today are expected to be conversant with reported accounting information as part of their regular job responsibilities. However, they often have little formal training in using such information.

For example, in most Western countries, corporate directors and senior executives are legally responsible for the content and quality of publicly reported accounting statements, yet typically have no accounting background or experience to help in the discharge of these responsibilities. The theme of the book is financial reporting as an essential and significant part of corporate governance. There is continuous pressure on companies from government and stakeholder groups to improve their governance and accountability structures and procedures. This book reveals how financial statements and related disclosures assist in good governance and accountability by providing relevant and reliable accounting signals of managerial performance. The Internet bubble has collapsed and the largest bankruptcy in US history, Enron, has made the call for greater transparency in financial reporting more important than ever. Andrew Higson draws attention to what is a 'true and fair view' in reporting and critically examines accounting theory and modern practice. Globalization and the accompanying investment facilities available have resulted in rapid popularity for international financial reporting standards (IFRS). However, differences often exist in terms of what firms report, and once inconsistency between tax regulations and financial reporting regulations occur, differences between taxable and accounting practices are inevitable. This book introduces a new approach to corporate financial reporting by investigating goal incongruence (GING) in the context of the principal and agent (PA) setting. The authors argue that improving the method for the disclosure of information would not only increase the quality of corporate financial information and reporting but also reduce the possibility of any GING arising. This book presents the financial implications of international accounting and financial reporting standards (IAS and IFRS), presenting numerous real-life situations, cases, examples and implications to reveal how GING might influence the implementation of corporate financial reporting of profit volumes and sizes, which are the leading drivers of and widely accepted proxies for corporate financial performance. What are companies? Why are they formed? Companies are not charities but are formed to provide a good income to their shareholders by selling us goods and services. Large companies in the UK are mostly known as Public Limited Companies (PLCs). There are about 2,000 PLCs in the London Stock Exchange. But do we understand these companies' objectives and activities? We can do so by examining the financial information they provide publicly in their annual financial reports. To be able to examine the financial statements issued by companies, you need to understand the regulations issued by the International Accounting Standards Board (IASB). This book explains the requirements of Financial Reporting Standards. Guidance on the disclosure requirements and examples from companies' financial reports are also provided and explained. Many of these company names are synonymous with our everyday lives. Think about Cadbury Chocolate, Unilever, Diageo, Shell, Boots.
