Applications Informatics Theory Standards Research Applications Policies and Quality Measures in Healthcare **Zero Day** Robert O'Harrow,2013-01-15 Will the world's next war be fought in cyberspace? It's going to happen, said former National Defense University Professor Dan Kuehl. So much of the world's activity takes place on the internet now, including commerce, banking, and communications, the Pentagon has declared war in cyberspace an inevitability. For more than a year, Washington Post reporter Robert O'Harrow has explored the threats proliferating in our digital universe. This ebook, *Zero Day: The Threat in Cyberspace*, is a compilation of that reporting. With chapters built around real people, including hackers, security researchers, and corporate executives, this book will help regular people, lawmakers, and businesses better understand the mind-bending challenge of keeping the internet safe from hackers and security breaches and all-out war. **Electronic Medical Records** Neil S. Skolnik,2010-10-20 Physician adoption of electronic medical records (EMRs) has become a national priority. It is said that EMRs have the potential to greatly improve patient care, to provide the data needed for more effective population management and quality assurance of both an individual practice's patients and well as patients of large health care systems, and the potential to create efficiencies that allow physicians to provide this improved care at a far lower cost than at present. There is currently a strong U.S. government push for physicians to adopt EMR technology, with the Obama administration emphasizing the use of EMRs as an important part of the future of health care and urging widespread adoption of this technology by 2014. This timely book for the primary care community offers a concise and easy-to-read guide for implementing an EMR system. Organized in six sections, this invaluable title details the general state of the EMR landscape, covering the government's incentive program, promises, and pitfalls of EMR technology, issues related to standardization, and the range of EMR vendors from which a provider can choose. Importantly, chapter two provides a detailed and highly instructional account of the experiences that a range of primary care providers have had in implementing EMR systems. Chapter three discusses how to effectively choose an EMR system, while chapters four and five cover all of the vital pre-implementation and implementation issues in establishing an EMR system in the primary care environment. Finally, chapter six discusses how to optimize and maintain a new EMR system to achieve the full cost savings desired. Concise, direct, but above all, honest in recognizing the challenges in choosing and implementing an electronic health record in primary care. *Electronic Medical Records: A Practical Guide for Primary Care* has been written with the busy primary care physician in mind. **Design for Care** Peter H. Jones,2013 Healthcare is constantly evolving with ever-increasing complexity and costs, presenting huge challenges for policy-making, decision-making, and system design. *Design for Care* presents an overview of the design issues facing healthcare and shows how designers can work with practice professionals, patients, caregivers, and other stakeholders to make a positive difference. Case studies, design methods, and leading-edge research illuminate emerging opportunities and provide inspiration for designing better services. EHealth2015 - Health Informatics Meets EHealth D. Hayn,G. Schreier,E. Ammenwerth,2015-06-11 Traditionally medicine has involved therapies chosen according to clinical guidelines often arrived at through clinical trials which categorized patients into patient groups Such clinical guidelines would dictate that all patients within a specific group should be treated in exactly the same way More recently the paradigm has shifted towards personalized medicine and in future individual treatment plans will depend more on the specific characteristics of individual patients including genomic data This book presents the proceedings of the 9th scientific eHealth conference the eHealth Summit Austria held in Vienna Austria in June 2015 Among the main topics addressed at the conference were active and ambient assisted living AAL eHealth education electronic patient and health records ethical legal and economic aspects of eHealth ICT for integrated treatment research and personalized medicine patient portals and personal health records semantic interoperability of information systems and visualization of clinical or epidemiological data One of the first fields of application for personalized medicine has been oncology with current diagnostic tools including molecular risk factors biomarkers and individual genomes The next step in personalized medicine will be to extend these to a more general personalized health approach Such individual risk

assessment and preventive strategies promise to have a huge impact on our healthcare systems and this book will be of interest to all those involved in healthcare research provision and practice

Surgical Care at the District Hospital World Health Organization, 2003-07-21 Many patients who present to district first referral level

hospitals require surgical treatment for trauma obstetric abdominal or orthopedic emergencies Often surgery cannot be safely postponed to allow their transfer to a secondary or tertiary level hospital but many district hospitals in developing countries have no specialist surgical teams and are staffed by medical nursing and paramedical personnel who perform a wide range of surgical procedures often with inadequate training The quality of surgical and acute care is often further constrained by poor facilities inadequate low technology apparatus and limited supplies of drugs materials and other essentials The mission of the team responsible for Clinical Procedures in the World Health Organization Department of Essential Health Technologies EHT is to promote the quality of clinical care through the identification promotion and standardization of appropriate procedures equipment and materials particularly at district hospital level WHO BCT has identified education and training as a particular priority especially for non specialist practitioners who practice surgery and anesthesia It has therefore developed Surgical Care at the District Hospital as a practical resource for individual practitioners and for use in undergraduate and postgraduate programs in service training and continuing medical education programs The manual is a successor of three earlier publications that are widely used throughout the world and that remain important reference texts General Surgery at the District Hospital WHO 1988 Surgery at the District Hospital Obstetrics Gynecology Orthopedics and Traumatology WHO 1991 Anesthesia at the District Hospital WHO 1988 second edition 2000 This new manual draws together material from these three publications into a single volume which includes new and updated material as well as material from Managing Complications in Pregnancy and Childbirth A Guide for Midwives and Doctors WHO 2000
