Index 2020 Update Human Capital in the Time of COVID 19 presents the first update of the HCI using health and education data available as of March 2020 It documents new evidence on trends examples of successes and analytical work on the utilization of human capital The new data collected before the global onset of COVID 19 can act as a baseline to track its effects on health and education outcomes The report highlights how better measurement is essential for policy makers to design effective interventions and target support In the immediate term investments in better measurement and data use will guide pandemic containment strategies and support for those who are most affected In the medium term better curation and use of administrative survey and identification data can guide policy choices in an environment of limited fiscal space and competing priorities In the longer term the hope is that economies will be able to do more than simply recover lost ground Ambitious evidence driven policy measures in health education and social protection can pave the way for today s children to surpass the human capital achievements and quality of life of the generations that preceded them
