Rails Around the World Brian Solomon,2020-10-06 In this visually glorious chronological history prolific railroad historian and photographer Brian Solomon curates a selection of the world s most significant trains and locomotives over the last two centuries Hop aboard to see trains and locomotives at work in scenic locations throughout North America Europe and Asia Two centuries after iron behemoths first began appearing in Europe and North America locomotives and trains continue to fascinate folks of all ages From North American steam and electric diesel machines designed and built by the likes of Baldwin and General Electric to state of the art electric freight and commuter trains in Europe and Asia Solomon provides a thorough look at the development of the most famous most influential and most technologically advanced trendsetters across more than two centuries with photography depicting heavy hardware at work in North America Europe and Asia Topics covered include The Consolidation Type The most prolific steam locomotive design in America and one of the most common types around the world Electric pioneers The earliest commercial applications for Edison Tesla and Siemens Featuring hardware from Germany and Scandinavia Gas Electrics and Wind splitters Pioneering

aerodynamic trains that looked like machines dreamed up by Rube Goldberg Budd stainless steel streamliners Burlington's famous Zephyr and the trains it inspired swept public imagination Britain's Sir Nigel Gresley and his remarkable locomotives Includes World Famous Flying Scotsman and steam speed record holder Mallard Electro Motive's F unit The iconic American diesel that killed steam Germany's Flying Hamburger The pioneer high speed diesel streamliners from 1932 Stanier's Black Five and 8F 2 8 0 Trendsetting British designs that found widespread application as far afield as Turkey and Egypt Spanish TALGO trains Innovative lightweight passenger trains sold around the world Japanese Shinkansen trains These record breaking electric trains are the epitome of high speed rail French TGVs Some of the world's fastest services with trains operating in more than a dozen nations Soviet M62 diesel Soviet era relics continue to work in the former Eastern Bloc Swedish Rc Electrics Over the last 50 years these icons have worked in countries across Europe as well as Iran Siemens Vectron During the last decade this versatile electric design has rapidly displaced older electric locomotives across Europe In addition to learning about the technology railfans learn about significant designers builders and operators When it comes to illustrated histories of railroading spanning time and nations fans of heavy iron will be hard pressed to find a more compelling collection

[The Future of Military Engines](#) Andrew P. Hunter, Gabriel Coll, Asya Akca, Schuyler Moore, 2021-10-08 CSIS's *The Future of Military Engines* looks at the state of the U S military engine industrial base and the choices confronting policymakers at the Department of Defense DoD The military engine industrial base is closely tied to the industrial base for commercial engines U S engine providers use many of the same facilities and largely the same supply chain for military and commercial engines The ability to leverage commercial supply chains is critical because supply chain quality underlies the performance advantage of U S military engines both for individual aircraft and military aircraft fleets International competitors such as Russia and China are seeking to overtake the U S in engines However the current U S advantage is sustainable if it is treated as a national priority Many military aircraft especially fighters require engines with important differences from commercial aircraft They fly different flight profiles and perform different jobs These differences mean that while DoD can leverage the commercial engine industrial base it must also make investments to sustain the industrial base's unique military components In the next few years DoD investment in military engines is projected to decrease significantly particularly for R D This presents a challenge as military unique engineering skills are highly perishable Four major policy choices confront DoD as it formulates its investment approach to military engines going forward

- 1 Priority
- 2 Resources
- 3 Business Model
- 4 Competition

The DoD is at an inflection point for engine investment and the time for choosing on these four key policy questions will come in the next few years

Driving and Engine Cycles Evangelos G.
