Aimed at assisting doctoral candidates and early-career researchers and their supervisors globally, this book is the first of its type to address the challenges faced by students when proposing new programs of research in the disciplines of gender, race, identity, indigeneity, and diversity within management and business. The problems researchers face derive from a lack of familiarity with the needed alignment of the methodology, conceptual framework, and the nature of epistemologies used in creating a coherent proposal. This results in project delays and unnecessary time in review as doctoral students and committees attempt to provide the required alignment. Essential reading for students and faculty engaged in these fields of study, the book provides a practical guide on how to navigate through these challenges and to arrive at a workable proposal that meets the requirements of the academy. To assist doctoral students in conducting their research, the book provides narratives that illustrate the complexities of researching gender, race, identity, indigeneity, and diversity in broad terms. It explains the importance of such research in creating positive social change and helping students identify the appropriate conceptual framework, align the problem statement with a purpose, construct the research question and the nature of the study, and identify the correct method to conduct the research. An essential guide for students and doctoral researchers, this book explains the dominant and marginalized epistemological orientations to acquaint doctoral researchers with the effects of their selections on the outcomes of their research. It provides guidance as to the appropriateness of quantitative or qualitative methods based on the selected epistemology and the problem statement. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version. As many medical and healthcare researchers have a love-hate relationship with statistics, the second edition of this practical reference book may make all the difference. Using practical examples, mainly from the authors' own research, the book explains how to make sense of statistics, turn statistical computer output into coherent information, and help decide which pieces of information to report and how to present them. The book takes you through all the stages of the research process, from the initial research proposal, through ethical approval and data analysis, to reporting on and publishing the findings. Helpful tips and information boxes, offer clear guidance throughout, including easily followed instructions on how to: -develop a quantitative research proposal for ethical/institutional approval or research funding -write up the statistical aspects of a paper for publication -choose and perform simple and more advanced statistical analyses -describe the statistical methods and present the results of an analysis. This new edition covers a wider range of statistical programs - SAS, STATA, R, and SPSS, and shows the commands needed to obtain the analyses and how to present it, whichever program you are using. Each specific example is annotated to indicate other scenarios that can be analysed using the same methods, allowing you to easily transpose the knowledge gained from the book to your own research. The principles of good presentation are also covered in detail, from translating relevant results into suitable extracts, through to randomised controlled trials, and how to present a meta-analysis. An added ingredient is the inclusion of code and datasets for all analyses shown in the book on our website (http://medical-statistics.info). Written by three experienced biostatisticians based in the UK and US, this is a step-by-step guide that will be invaluable to researchers and postgraduate students in medicine, those working in the professions allied to medicine, and statisticians in consultancy roles. Research: This is it! is a unique textbook that offers an integrated discussion of quantitative and qualitative research. The theory is easily accessible, with appealing examples taken from all kinds of studies. This textbook light-heartedly describes the essence of quantitative and qualitative research in four steps in a such a way that students will want to do the research presented in the book. Step 1: Formulating the problem Step 2: The research design Step 3: Collecting data Step 4: Processing, analysing and reporting research data With these steps, you have a valuable checklist at your disposal for designing and conducting your own research and for evaluating research proposals and reports. Excel is used for quantitative data analysis, in addition the book has an appendix explaining how to use SPSS.
