It discusses teams involved, how to organize them, and the first steps that lay the foundation for an effective hazardous incident response. Treating nuclear, biological, and chemical agent exposures presents a unique set of challenges. These scenarios usually involve multiple exposures, sometimes even mass exposures, from a single, often poorly-defined, event. Early symptoms are not distinct and can often be variable. Laboratory analyses may be required from environmental, often nonbio Cancer cells can change and adapt, especially within the host environment; a phenomenon known as cancer plasticity. Several factors, including the immune system can influence, and be influenced by, cancer plasticity which in turn can impact upon patient responses to treatment. As such, we currently face several challenges for implementing combination therapies as effective cancer treatment strategies. We have compiled a topic with a number of articles that emphasize the various aspects of cancer plasticity, describing in particular the important role of the tumor microenvironment. As we embark on a new era of precision medicine with multi-modal therapies for improving patient outcomes, this topic highlights some relevant points for consideration that are pertinent to the incorporation and effective use of new treatments as part of cancer treatment regimens, including immune-modulating drugs. Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment. "Chad Ford reminds us that humanity lies within all of us, and although conflict is everywhere in today's world, we have the tools we need to overcome obstacles and to thrive. This is a fantastic, timely book that I highly recommend." —Steve Kerr, Head Coach, Golden State Warriors Knowing how to transform conflict is critical in both our personal and professional lives. Yet, by and large, we are terrible at it. The reason, says longtime mediator Chad Ford, is fear. When conflict comes, our instincts are to run or fight. To transform conflict, Ford says we need to turn toward the people we are in conflict with, put down our physical and emotional weapons, and really love them with the kind of love that leads us to treat others as fellow human beings, not as objects in our way. We have to open ourselves up with no guarantee that anyone on the other side will do the same. While this can feel even more dangerous than conflict itself, it allows us to see the humanity of others so clearly that their needs and desires matter to us as much as our own. Ford shows dangerous love in action through examples ranging from his work in the Middle East to a deeply moving story about reconciling with his father. He explains why we disconnect from people at the very time we need to be most connected and the predictable patterns of justification and escalation that ensue. Most importantly, he gives us a path to practice dangerous love in the conflicts that matter most to us. In a managed care era, the MMPI-2 is becoming an overloaded workhorse, required to generate more and more of the assessments that a battery of instruments once did. Though all now rely on the MMPI-2 for good reasons, and the MMPI has fallen out of use entirely, some important and clinically useful scales were lost in the transition. Edward Gotts and Thomas Knudsen have recovered these scales and integrated them with all the standard MMPI-2 scales, the recently published Restructured Clinical Scales, and a number of scales they have constructed to assess positive strengths and coping abilities, and response consistency-inconsistency. This book lays out their new Content Cluster interpretive approach. Drawing on data from a large psychiatric inpatient sample, they present item composition, reliability, and validity information for each recovered and new scale, and convincingly demonstrate that their new Content Cluster approach results in improved prediction and interpretive power. They also show how to conjoin Rorschach and MMPI-2 results in more effective assessment strategies, and how to tie MMPI-2 results to specific DSM-IV criteria. The Clinical Interpretation of the MMPI-2: A Content Cluster Approach offers psychologists essential new tools for clinical and personality assessment.
