First Order Differential Equations

5.(a)

(b) If $y(0) > -3$, solutions eventually have positive slopes, and hence increase without bound. If $y(0) < -3$, solutions have negative slopes and decrease without bound.

(c) The integrating factor is $\mu(t) = e^{-\int 2dt} = e^{-2t}$. The differential equation can be written as $e^{-2t}y' - 2e^{-2t}y = 3e^{-t}$, that is, $(e^{-2t}y)' = 3e^{-t}$. Integration of both sides of the equation results in the general solution $y(t) = -3e^t + ce^{2t}$. It follows that all solutions will increase exponentially if $c > 0$ and will decrease exponentially
