Environmental Risk Assessment Ian Lerche, Walter Glaesser, 2007-04-03 This book explores environmental and human risk problems caused by contamination from the perspective of real world applications with quantitative procedures It includes risk methods for environmental problems where data are sparse or fuzzy and incorporates political social and economic considerations in determining directions of remediation solutions for environmental contaminant problems It highlights the impact of contaminants on human health sometimes fatal and the anthropogenic exacerbation of natural processes

Liquid Rocket Engine Combustion Instability Vigor Young, 1995 Annotation Since the invention of the V 2 rocket during World War II combustion instabilities have been recognized as one of the most difficult problems in the development of liquid propellant rocket engines This book is the first published in the United States on the subject since NASA s Liquid Rocket Combustion Instability NASA SP 194 in 1972 In this book experts cover four major subject areas engine phenomenology and case studies fundamental mechanisms of combustion instability combustion instability analysis and engine and component testing Especially noteworthy is the inclusion of technical information from Russia and China a first

Theory and Computation of Electromagnetic Fields in Layered Media Vladimir Okhmatovski, Shucheng Zheng, 2024-04-09
Explore the algorithms and numerical methods used to compute electromagnetic fields in multi layered media In *Theory and Computation of Electromagnetic Fields in Layered Media* two distinguished electrical engineering researchers deliver a detailed and up to date overview of the theory and numerical methods used to determine electromagnetic fields in layered media The book begins with an introduction to Maxwell s equations the fundamentals of electromagnetic theory and concepts and definitions relating to Green s function It then moves on to solve canonical problems in vertical and horizontal dipole radiation describe Method of Moments schemes discuss integral equations governing electromagnetic fields and explains the Michalski Zheng theory of mixed potential Green s function representation in multi layered media Chapters on the evaluation of Sommerfeld integrals procedures for far field evaluation and the theory and application of hierarchical matrices are also included along with A thorough introduction to free space Green s functions including the delta function model for point charge and dipole current Comprehensive explorations of the traditional form of layered medium Green s function in three dimensions Practical discussions of electro quasi static and magneto quasi static fields in layered media including electrostatic fields in two and three dimensions In depth examinations of the rational function fitting method including direct spectra fitting with VECTFIT algorithms Perfect for scholars and students of electromagnetic analysis in layered media *Theory and Computation of Electromagnetic Fields in Layered Media* will also earn a place in the libraries of CAD industry engineers and software developers working in the area of computational electromagnetics

Dynamics and Simulation of Flexible Rockets Timothy M. Barrows, Jeb S. Orr, 2020-12-10 *Dynamics and Simulation of Flexible Rockets* provides a full state multiaxis treatment of launch vehicle flight mechanics and provides the state equations in a format that can be readily coded into a simulation environment Various forms of the mass matrix for the vehicle dynamics are presented The book also discusses important forms of coupling such as between the nozzle motions and the flexible body This book is designed to help practicing

aerospace engineers create simulations that can accurately verify that a space launch vehicle will successfully perform its mission Much of the open literature on rocket dynamics is based on analysis techniques developed during the Apollo program of the 1960s Since that time large scale computational analysis techniques and improved methods for generating Finite Element Models FEMs have been developed The art of the problem is to combine the FEM with dynamic models of separate elements such as sloshing fuel and moveable engine nozzles The pitfalls that may occur when making this marriage are examined in detail Covers everything the dynamics and control engineer needs to analyze or improve the design of flexible launch vehicles Provides derivations using Lagrange s equation and Newton Euler approaches allowing the reader to assess the importance of nonlinear terms Details the development of linear models and introduces frequency domain stability analysis techniques Presents practical methods for transitioning between finite element models incorporating actuator dynamics and developing a preliminary flight control design
