This book grows from the simple fact that learning by engaging with objects can be a powerful experience. Whether you're a museum or gallery professional, a schoolteacher, an interpreter, or simply intrigued by this method of teaching, there will be something here for you. Wonderful Things is packed with bright and tested ideas - often in the form of games - which will help people of all ages relate to, understand and explore museum objects. After an exploration of the process of learning from objects, the book puts these principles into practice, in the form of over 50 easy-to-set-up games, designed to facilitate creative interaction with objects. Although in themselves straightforward, many of the games can have surprisingly powerful and stimulating results, impacts and implications. Each game has been tested out and refined in practice many times, and guidance is provided to ensure each game both runs smoothly and provides the best possible learning outcomes. All the games are ideal for use in classroom or museum settings, and most are easily adapted for use with all educational ages, from 5-18. However, some can also successfully facilitate interaction with with adults; and the more complex, drama-based games have been used in psychotherapeutic work and with older people for reminiscence. Wonderful Things is designed for use with a wide range of specialist staff - including educators, interpreters, designers, curators, gallery "explainers," guides and volunteers - in museums, galleries, science centres, historic houses and sites, parks, and zoos. Praise for Wonderful Things: "A practical combination of inspired ideas tempered with practical experience. The holistic approach is refreshing and anyone working with artefacts should find this an indispensable read. I thoroughly enjoyed Wonderful Things!" Study materials for all learning styles • Custom-made Practice Exam Software • 95 short narrated video tutorials for every outcome in the book • End-of-chapter self-exam and review questions • 75 Flashcards • Exam Day Study Guide About the author Daniel John Stine AIA, CSI, CDT, is a registered architect with over twenty years of experience in the field of architecture. Throughout these years of professional practice, Stine has leveraged many of the Microsoft Office products to organize and manage complex projects. In addition to Microsoft Office certification study guides, Stine has written multiple books on architectural design software, all written using Microsoft Word and published by SDC Publications The International Handbook of Research in Professional and Practice-based Learning discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and shaped through their professional environment and practices. Moreover, in turn, the practice and processes of learning through practice are shaped by their development, all of which are required to be understood through a range of research orientations, methods and findings. This Handbook will appeal to academics working in fields of professional practice, including those who are concerned about developing these capacities in their students. In addition, students and research students will also find this Handbook a key reference resource to the field. W.S.N.S. is probably Washington State Normal School in Industry, Maine. The use of museum collections as a path to learning for university students is fast becoming a new pedagogy for higher education. Despite a strong tradition of using lectures as a way of delivering the curriculum, the positive benefits of 'active' and 'experiential learning' are being recognised in universities at both a strategic level and in daily teaching practice. As museum artefacts, specimens and art works are used to evoke, provoke, and challenge students' engagement with their subject, so transformational learning can take place. This unique book presents the first comprehensive exploration of 'object-based learning' as a pedagogy for higher education in a broad context. An

international group of authors offer a spectrum of approaches at work in higher education today. They explore contemporary principles and practice of object-based learning in higher education, demonstrating the value of using collections in this context and considering the relationship between academic discipline and object-based learning as a teaching strategy. The three-volume set LNCS 8009-8011 constitutes the refereed proceedings of the 7th International Conference on Universal Access in Human-Computer Interaction, UAHCI 2013, held as part of the 15th International Conference on Human-Computer Interaction, HCII 2013, held in Las Vegas, USA in July 2013, jointly with 12 other thematically similar conferences. The total of 1666 papers and 303 posters presented at the HCII 2013 conferences was carefully reviewed and selected from 5210 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 230 contributions included in the UAHCI proceedings were carefully reviewed and selected for inclusion in this three-volume set. The 78 papers included in this volume are organized in the following topical sections: universal access to smart environments and ambient assisted living; universal access to learning and education; universal access to text, books, ebooks and digital libraries; health, well-being, rehabilitation and medical applications; access to mobile interaction. Step-by-step, Creating a Reusable Learning Objects Strategy shows how to create and implement a reusable learning objects (RLO) strategy that is flexible enough to accommodate your individual needs or use across a global organization.
