

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1-Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2-Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal. Invasive Species in Forests and Rangelands of the United States

Therese M. Poland, Toral Patel-Weynand, Deborah M. Finch, Chelcy Ford Miniatt, Deborah C. Hayes, Vanessa M. Lopez, 2021-02-01 This open access book describes the serious threat of invasive species to native ecosystems. Invasive species have caused and will continue to cause enormous ecological and economic damage with ever increasing world trade. This multi-disciplinary book written by over 100 national experts presents the latest research on a wide range of natural science and social science fields that explore the ecology impacts and practical tools for management of invasive species. It covers species of all taxonomic groups from insects and pathogens to plants, vertebrates and aquatic organisms that impact a diversity of habitats in forests, rangelands and grasslands of the United States. It is well illustrated, provides summaries of the most important invasive species and issues impacting all regions of the country and includes a comprehensive primary reference list for each topic. This scientific synthesis provides the cultural, economic, scientific and social context for addressing environmental challenges posed by invasive species and will be a valuable resource for scholars, policy makers, natural resource managers and practitioners.

Urban Watersheds Daniel Rogers, 2020-05-06 Understanding that the natural world beneath our feet is the point at which civilization meets the natural world is critical to the success of restoration and prevention efforts to reduce contaminant impacts and improve the global environment because of one simple fact: contaminants do not respect country borders. Contaminants often begin their destructive journey immediately after being released and can affect the entire planet if the release is in just the right amount at just the right location and at just the right time. Taking an interdisciplinary approach, *Urban Watersheds: Geology, Contamination, Environmental Regulations and Sustainability*, Second Edition presents more than 30 years of research and professional practice on urban watersheds from the fields of environmental geology, geochemistry, risk analysis, hydrology and urban planning. The geological characteristics of urbanized watersheds along with the physical and chemical properties of their common contaminants are integrated to assess risk factors for soil, groundwater and air. This new edition continues to examine the urban environment and the geology beneath urban areas, evaluates the contamination that affects watersheds in urban regions and addresses redevelopment strategies. Features of the Second Edition: Examines contaminants and the successes of environmental regulation worldwide and highlights the areas that need improvement. Describes several advances in investigation techniques in urban regions that now provide a huge leap forward in data collection resolution and accuracy. Explains the importance of understanding the geological and hydrogeologic environments of urban and developed regions. Provides new and enhanced methods presented as a sustainability model for assessing risks to human health and the environment from negative human-induced contaminant impacts. Includes a new chapter that surveys how environmental regulations have been successful or have failed at protecting the air, water and land in urban areas. Suitable for use as a textbook and as a professional practice reference, the book includes case studies on successful and unsuccessful approaches to contaminant remediation as well as

practical methods for environmental risk assessment PowerPoint presentations of selected portions of the book are available with qualifying course adoption Daniel T Rogers is currently the Director of Environmental Affairs at Amsted Industries Inc in Chicago Illinois His writings address environmental geology hydrogeology geologic vulnerability and mapping contaminant fate and transport urban geology environmental site investigations contaminant risk brownfield redevelopment and sustainability He has taught geology and environmental chemistry at Eastern Michigan University and the University of Michigan Prentice Hall Biology Kenneth Raymond Miller, Joseph S. Levine, 2007 Responsible Conduct of Research Adil E. Shamoo, David B. Resnik, 2009-02-12 Recent scandals and controversies such as data fabrication in federally funded science data manipulation and distortion in private industry and human embryonic stem cell research illustrate the importance of ethics in science Responsible Conduct of Research now in a completely updated second edition provides an introduction to the social ethical and legal issues facing scientists today **Ecology and the Environment** Russell K. Monson, 2014-10-02 In this book plant biology is considered from the perspective of plants and their surrounding environment including both biotic and abiotic interactions The intended audience is undergraduate students in the middle or final phases of their programs of study Topics are developed to provide a rudimentary understanding of how plant environment interactions span multiple spatiotemporal scales and how this rudimentary knowledge can be applied to understand the causes of ecosystem vulnerabilities in the face of global climate change and expansion of natural resource use by human societies In all chapters connections are made from smaller to larger scales of ecological organization providing a foundation for understanding plant ecology Where relevant environmental threats to ecological systems are identified and future research needs are discussed As future generations take on the responsibility for managing ecosystem goods and services one of the most effective resources that can be passed on is accumulated knowledge of how organisms populations species communities and ecosystems function and interact across scales of organization This book is intended to provide some of that knowledge and hopefully provide those generations with the ability to avoid some of the catastrophic environmental mistakes that prior generations have made *Park Science*, 1990 *Cornell Soil Health Assessment Training Manual* Beth K. honey bee as well as some butterflies bats and hummingbirds For most managed and wild pollinator species however population trends have not been assessed because populations have not been monitored over time In addition for wild species with demonstrated declines it is often difficult to determine the causes or consequences of their decline This report outlines priorities for research and monitoring that are needed to improve information on the status of pollinators and establishes a framework for conservation and restoration of pollinator species and communities **Biomimicry** Janine M. Benyus,2009-08-11 Repackaged with a new afterword this valuable and entertaining New York Times Book Review book explores how scientists are adapting nature s best ideas to solve tough 21st century problems Biomimicry is rapidly transforming life on earth Biomimics study nature s most successful ideas over the past 3 5 million years and adapt them for human use The results are revolutionizing how materials are invented and how we compute heal ourselves repair the environment and feed the world Janine Benyus takes readers into the lab and in the field with maverick thinkers as they discover miracle drugs by watching what chimps eat when they re sick learn how to create by watching spiders weave fibers harness energy by examining how a leaf converts sunlight into fuel in trillionths of a second and many more examples Composed of stories of vision and invention personalities and pipe dreams Biomimicry is must reading for anyone interested in the shape of our future Recirculating Aquaculture Michael Ben Timmons,James M.
