Virtually every aspect of the modern Western worldview has its roots in the remarkably diverse body of philosophy that emerged from a small patch of land in the Mediterranean thousands of years ago. This volume offers an overview of the highlights of ancient Greek philosophy, as well as an historical account of the lives of many of the scholars and thinkers who helped shaped it. An accessibly-written survey of the origins and growth of the discipline of medievalism studies. The field known as "medievalism studies" concerns the life of the Middle Ages after the Middle Ages. Originating some thirty years ago, it examines reinventions and reworkings of the medieval from the Reformation to postmodernity, from Bale and Leland to HBO's Game of Thrones. But what exactly is it? An offshoot of medieval studies? A version of reception studies? Or a new form of cultural studies? Can such a diverse field claim coherence? Should it be housed in departments of English, or

History, or should it always be interdisciplinary? In responding to such questions, the author traces the history of medievalism from its earliest appearances in the sixteenth century to the present day, across a range of examples drawn from the spheres of literature, art, architecture, music and more. He identifies two major modes, the grotesque and the romantic, and focuses on key phases of the development of medievalism in Europe: the Reformation, the late eighteenth century, and above all the period between 1815 and 1850, which, he argues, represents the zenith of medievalist cultural production. He also contends that the 1840s were medievalism's one moment of canonicity in several European cultures at once. After that, medievalism became a minority form, rarely marked with cultural prestige, though always pervasive and influential. *Medievalism: a Critical History* scrutinises several key categories - space, time, and selfhood - and traces the impact of medievalism on each. It will be the essential guide to a complex and still evolving field of inquiry. David Matthews is Professor of Medieval and Medievalism Studies at the University of Manchester. A history of German film dealing with

individual films as works of art has long been needed. Existing histories tend to treat cinema as an economic rather than an aesthetic phenomenon; earlier surveys that do engage with individual films do not include films of recent decades. This book treats representative films from the beginnings of German film to the present. Providing historical context through an introduction and interchapters preceding the treatments of each era's films, the volume is suitable for semester- or year-long survey courses and for anyone with an interest in German cinema. The films: *The Student of Prague* - *The Cabinet of Dr. Caligari* - *The Last Laugh* - *Metropolis* - *The Blue Angel* - *M* - *Triumph of the Will* - *The Great Love* - *The Murderers Are among Us* - *Sun Seekers* - *Trace of Stones* - *The Legend of Paul and Paula* - *Solo Sunny* - *The Bridge* - *Young T rless* - *Aguirre, The Wrath of God* - *Germany in Autumn* - *The Marriage of Maria Braun* - *The Tin Drum* - *Marianne and Juliane* - *Wings of Desire* - *Maybe, Maybe Not* - *Rossini* - *Run Lola Run* - *Good Bye Lenin* - *Head On* - *The Lives of Others* Stephen Brockmann is Professor of German at Carnegie Mellon University and past President of the German Studies Association. "Richard Barsam

has given us as comprehensive a study of the origins and development of the nonfiction mode in motion pictures as we are ever likely to have in one volume. He draws on all the major written sources and many which are little known, and he shares with us many eloquent descriptions of the films themselves, giving us a valuable textbook."

--Historical Journal of Film, Radio, and Television The first analytical history of Sarnath, the place where the Buddha preached his first sermon and established the Buddhist monastic order. Sarnath has long been regarded as the place where the Buddha preached his first sermon and established the Buddhist monastic order. Excavations at Sarnath have yielded the foundations of temples and monastic dwellings, two Buddhist reliquary mounds (stupas), and some of the most important sculptures in the history of Indian art. This volume offers the first critical examination of the historic site. Frederick M. Asher provides a *longue durée* (long-term) analysis of Sarnath—including the plunder, excavation, and display of antiquities and the Archaeological Survey of India's presentation—and considers what lies beyond the fenced-in excavated area. His

analytical history of Sarnath's architectural and sculptural remains contains a significant study of the site's sculptures, their uneven production, and their global distribution. Asher also examines modern Sarnath, which is a living establishment replete with new temples and monasteries that constitute a Buddhist presence on the outskirts of Varanasi, the most sacred Hindu city. This book provides a comprehensive, critical overview of the developments in architecture from 1960 to 2010. The first section provides a presentation of major movements in architecture after 1960, and the second, a geographic survey that covers a wide range of territories around the world. This book not only reflects the different perspectives of its various authors, but also charts a middle course between the 'aesthetic' histories that examine architecture solely in terms of its formal aspects, and the more 'ideological' histories that subject it to a critique that often skirts the discussion of its formal aspects. Rod Serling's anthology series *The Twilight Zone* is recognized as one of the greatest television shows of all time. Always intelligent and thought-provoking, the show used the conventions of

several genres to explore such universal qualities as violence, fear, prejudice, love, death, and individual identity. This comprehensive reference work gives a complete history of the show, from its beginning in 1959 to its final 1964 season, with critical commentaries, incisive analyses, and the most complete listing of casts and credits ever published. Biographical profiles of writers and contributors are included, followed by detailed appendices, bibliography and index. In the absence of noble public goals, admired leaders, and compelling issues, many warn of a dangerous erosion of civil society. Are they right? What are the roots and implications of their insistent alarm? How can public life be enriched in a period marked by fraying communities, widespread apathy, and unprecedented levels of contempt for politics? How should we be thinking about civil society? *Civil Society* examines the historical, political, and theoretical evolution of how civil society has been understood for the past two and a half millennia. From Aristotle and the Enlightenment philosophers to Colin Powell's Volunteers for America, Ehrenberg provides an indispensable analysis of the

possibilities-and limits-of what this increasingly important idea can offer to contemporary political affairs. *Civil Society* is the winner of the Michael J. Harrington Award from the Caucus for a New Political Science of APSA for the best book published during 1999. This highly acclaimed survey of modern architecture and its origins has become a classic since it first appeared in 1980, and has helped to shape architectural practice and discourse worldwide. For this extensively revised and updated fifth edition, Kenneth Frampton has added a new section that explores in detail the modernist tradition in architecture across the globe in the late twentieth and early twenty-first centuries. He examines the varied ways in which architects are not only responding to the geographical, climatic, material and cultural contexts of their buildings, but also pursuing distinct lines of approach that emphasize topography, morphology, sustainability, materiality habitat and civic form. It remains an essential book for all students of architecture and architectural history. The radical history of space exploration from the Russian Cosmists to Elon Musk Many societies have imagined going to live in

space. What they want to do once they get up there - whether conquering the unknown, establishing space "colonies," privatising the moon's resources - reveals more than expected. In this fascinating radical history of space exploration, Fred Scharmen shows that often science and fiction have combined in the imagined dreams of life in outer space, but these visions have real implications for life back on earth. For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth. For others, such as Wernher Von Braun, it was an engineering task that combined, in the Space Race, the Cold War, and during World War II, with destructive geopolitics. Arthur C. Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction. Meanwhile NASA planned and managed the space station like an earthbound corporation. Today, the market has arrived into outer space and exploration is the plaything of superrich technology billionaires, who plan to privatise the mineral wealth for themselves. Are other worlds really possible? Bringing these figures and ideas together reveals a completely different story of our

relationship with outer space, as well as the dangers of our current direction of extractive capitalism and colonisation. Provides a critical history of Western architecture theory from the ancient world to the present day. It looks at how the architect generates architectural form in order to explain a number of issues, including the origins of style, the persistence of tradition and the role of genius. Readers will enjoy uncovering the secrets, stories, and meaning behind Pop art. The title will also introduce famous Pop art artists such as Andy Warhol and famous works like the LOVE statue in New York City. This series is at a Level 3 and is written specifically for transitional readers. Aligned to the Common Core standards & correlated to state standards. How did the individual human being become the focus of the contemporary discourse on security? What was the role of the United Nations in "securing" the individual? What are the payoffs and costs of this extension of the concept? Neil MacFarlane and Yuen Foong Khong tackle these questions by analyzing historical and contemporary debates about what is to be secured. From Westphalia through the 19th century, the state's claim to be the object of security was sustainable because it offered its subjects some measure of protection. The state's ability to provide security for its citizens came under heavy strain in the 20th century as a result of technological, strategic, and ideological innovations. By the end of World War II, efforts to reclaim the security rights of individuals gathered pace, as seen in the Universal Declaration of Human Rights and a host of United Nations covenants and conventions. MacFarlane and Khong highlight the UN's work in promoting human security ideas since the 1940s, giving special emphasis to its role in extending the notion

of security to include development, economic, environmental, and other issues in the 1990s. "A proudly partisan history of the British aristocracy - which scores some shrewd hits against the upper class themselves, and the nostalgia of the rest of us for their less endearing eccentricities. A great antidote to Downton Abbey." (Mary Beard) Exploring the extraordinary social and political dominance enjoyed by the British aristocracy over the centuries, Entitled seeks to explain how a tiny number of noble families rose to such a position in the first place. It reveals the often nefarious means they have employed to maintain their wealth, power and prestige and examines the greed, ambition, jealousy and rivalry which drove aristocratic families to guard their interests with such determination. In telling their history, Entitled introduces a cast of extraordinary characters: fierce warriors, rakish dandies, political dilettantes, charming eccentrics, arrogant snobs and criminals who quite literally got away with murder. Of all the sciences and social sciences, management is the one that most deliberately turns its back on the past. Yet management as we know it today did not spring into life fully

formed. Management has more than just a present; it also has a past, and a future, and all three are inextricably linked. This book charts the evolution of management as an intellectual discipline, from ancient times to the present day. Contemporary management challenges, including sustainability, technology and data, and legitimacy are analysed through an historical lens and with the benefit of new case studies. The author helps readers understand how the evolution of management ideas has interacted with changes in society. By framing management's history as one of challenge and response, this new edition is the perfect accompaniment for students and scholars seeking meaningful study in the business school and beyond. Essential reading as a core textbook in management history, the book is also valuable supplementary reading across the humanities and social sciences. "A remarkable book, in which Forsythe uses his thorough knowledge of the ancient evidence to reconstruct a coherent and eminently plausible picture which in turn illuminates early Roman society more immediately than any other category of evidence is able to do. Forsythe displays his impressive ability

to demonstrate to what extent and why the tradition that dominates the extant historical narratives is not credible."—Kurt Raaflaub, author of *The Discovery of Freedom in Ancient Greece* "An excellent synthetic treatment of early Roman history found in both modern literary and archaeological materials."—Richard Mitchell, author of *Patricians and Plebeians*

In modern life, technology is everywhere. Yet as a concept, technology is a mess. In popular discourse, technology is little more than the latest digital innovations. Scholars do little better, offering up competing definitions that include everything from steelmaking to singing. In *Technology: Critical History of a Concept*, Eric Schatzberg explains why technology is so difficult to define by examining its three thousand year history, one shaped by persistent tensions between scholars and technical practitioners. Since the time of the ancient Greeks, scholars have tended to hold technicians in low esteem, defining technical practices as mere means toward ends defined by others. Technicians, in contrast, have repeatedly pushed back against this characterization, insisting on the dignity, creativity, and cultural worth of their work. The tension

between scholars and technicians continued from Aristotle through Francis Bacon and into the nineteenth century. It was only in the twentieth century that modern meanings of technology arose: technology as the industrial arts, technology as applied science, and technology as technique. Schatzberg traces these three meanings to the present day, when discourse about technology has become pervasive, but confusion among the three principal meanings of technology remains common. He shows that only through a humanistic concept of technology can we understand the complex human choices embedded in our modern world. This critical interdisciplinary study charts the modern history of mental health services, reflects upon the evolution of care in communities and considers the most effective policies and practices for the future. Starting with the development of community care in the 1960s, Cummins explores the political, economic and bureaucratic factors behind the changes and crises in mental health social care since, returning to those roots to identify progressive principles that can pave a sustainable pathway forward. This is a ground-breaking contribution to debates

about the role, values and future of community care and is vital reading for students, teachers and researchers in the field of social work and mental health. **NEW YORK TIMES BESTSELLER** • Dive deep into the history of the world's most popular fantasy RPG livestream with the cast of Critical Role in this definitive guide featuring never-before-seen illustrations and photos. This is a cultural history of borders, hygiene and race. It is about foreign bodies, from Victorian Vaccines to the pathologized interwar immigrant, from smallpox quarantine to the leper colony, from sexual hygiene to national hygiene to imperial hygiene. Taking British colonialism and White Australia as case studies, the book examines public health as spatialized biopolitical governance between 1850 and 1950. Colonial management of race dovetailed with public health into new boundaries of rule, into racialised cordons sanitaires . This is the enlarged edition of a Critical History of Modern Philosophy. In this new edition Greek and Medieval Philosophies have been added. The book also includes a critical and comparative account of the major contributions of eight modern thinkers. To this exposition the idealism of Hegel and Bradley has been introduced. Recent discussions concerning Hume, Kant, Hegel and Bradley have also been

incorporated. Whilst giving fully an analytic account of topics, the author maintains that philosophy is a holistic enterprise of man, as we find it in Spinoza, Kant, Hegel and Bradley. The book has turned out to be a reliable and useful to the students of the subject throughout India. This thoroughly revised and enlarged edition will prove to be all the more serviceable in general. A study of the emergence in post-Kantian continental philosophy of a focus on the lived experience of temporality. The project of all philosophy may be to gain reconciliation with time, even if not every philosopher has dealt with time expressly. A confrontation with the passing of time and with human finitude runs through the history of philosophy as an ultimate concern. In this genealogy of the concept of temporality, David Hoy examines the emergence in a post-Kantian continental philosophy of a focus on the lived experience of the "time of our lives" rather than on the time of the universe. The purpose is to see how phenomenological and poststructuralist philosophers have tried to locate the source of temporality, how they have analyzed time's passing, and how they have depicted our relation to time once it

has been—in a Proustian sense—regained. Hoy engages with competing theoretical tactics for reconciling us to our fleeting temporality, drawing on work by Kant, Heidegger, Hegel, Husserl, Merleau-Ponty, Nietzsche, Gadamer, Sartre, Bourdieu, Foucault, Bergson, Deleuze, Žižek, and Derrida. Hoy considers four existential strategies for coping with the apparent flow of temporality, including Proust's passive and Walter Benjamin's active reconciliation through memory, Žižek's critique of poststructuralist politics, Foucault's confrontation with the temporality of power, and Deleuze's account of Aion and Chronos. He concludes by exploring whether a dual temporalization could be what constitutes the singular “time of our lives.” This acclaimed survey of modern architecture and its origins has become a classic since it first appeared in 1980. For this fourth edition Kenneth Frampton has added a major new chapter that explores the effects of globalization on architecture in recent years, the rise and rise of the celebrity architect, and the way in which practices worldwide have addressed such issues as sustainability and habitat. The bibliography has also been updated and expanded, making

this volume more complete and indispensable than ever. Since its inception in November 1963, the British science fiction television series Doctor Who has exerted an enormous impact on the world of science fiction (over 1,500 books have been written about the show). The series follows the adventures of a mysterious "Time Lord" from the distant planet Gallifrey who travels through time and space to fight evil and injustice. Along the way, he has visited Rome under the rule of Nero, played backgammon with Kublai Khan, and participated in the mythic gunfight at the O.K. Corral. Predating the Star Trek phenomenon by three years, Doctor Who seriously dealt with continuing characters, adult genre principles and futuristic philosophies. Critical and historical examinations of the ideas, philosophies, conceits and morals put forth in the Doctor Who series, which ran for 26 seasons and 159 episodes, are provided here. Also analyzed are thematic concepts, genre antecedents, the overall cinematography and the special effects of the long-running cult favorite. The various incarnations of Doctor Who, including television, stage, film, radio, and spin-offs are discussed. In addition, the book provides an extensive listing of

print, Internet, and fan club resources for Doctor Who. Featuring 19 color plates and 65 b&w illustrations, this text critically examines the imagery, process, and pictorial structure of works by American painter Edwin Dickinson (1891-1978). Drawing upon 56 years of the artist's journals and several thousand pages of his letters, Ward makes connections b Methods in World History is the first international volume that systematically addresses a number of methodological problems specific to the field of World History. Prompted by a lack of applicable works, the authors advocate a considerable sharpening of the tools used within the discipline. Theories constructed on poor foundations run an obvious risk of reinforcing flawed assumptions, and of propping up other, more ideological constructions. The dedicated critical approach outlined in this volume helps to mitigate such risks. Each essay addresses a particular issue, discussing its problems, giving practical examples, and offering solutions and ways of overcoming the difficulties involved. The perspectives are varied, the criticism focussed, and a common theme of coalescence is maintained throughout. This unique anthology will be of

great use to advanced scholars of World History, and to students entering the field for the first time. This innovative text recounts the history of photography through a series of thematically structured chapters. Designed and written for students studying photography and its history, each chapter approaches its subject by introducing a range of international, contemporary photographers and then contextualizing their work in historical terms. The book offers students an accessible route to gain an understanding of the key genres, theories and debates that are fundamental to the study of this rich and complex medium. Individual chapters cover major topics, including: · Description and Abstraction · Truth and Fiction · The Body · Landscape · War · Politics of Representation · Form · Appropriation · Museums · The Archive · The Cinematic · Fashion Photography

Boxed focus studies throughout the text offer short interviews, curatorial statements and reflections by photographers, critics and leading scholars that link photography's history with its practice. Short chapter summaries, research questions and further reading lists help to reinforce learning and promote discussion.

Whether coming to the subject from an applied photography or art history background, students will benefit from this book's engaging, example-led approach to the subject, gaining a sophisticated understanding of international photography in historical terms. This acclaimed survey of modern architecture and its origins has become a classic since it first appeared in 1980. For the fourth edition Kenneth Frampton has added a major new section that explores the effects of globalization on architecture in recent years and examines the phenomenon of international celebrity architects who are increasingly active all over the world. The bibliography has been updated and expanded, making this volume more complete and indispensable than ever.

Schizophrenia was 20th century psychiatry's arch concept of madness. Yet for most of that century it was both problematic and contentious. This history explores schizophrenia's historic instability via themes such as symptoms, definition, classification and anti-psychiatry. In doing so, it opens up new ways of understanding 20th century madness.

In *Economics in Perspective*, renowned economist John Kenneth Galbraith presents a compelling and

accessible history of economic ideas, from Aristotle through the twentieth century. Examining theories of the past that have a continuing modern resonance, he shows that economics is not a timeless, objective science, but is continually evolving as it is shaped by specific times and places. From Adam Smith's theories during the Industrial Revolution to those of John Maynard Keynes after the Great Depression, Galbraith demonstrates that if economic ideas are to remain relevant, they must continually adapt to the world they inhabit. A lively examination of economic thought in historical context, *Economics in Perspective* shows how the field has evolved across the centuries. "A smart, readable history of the Democrats that reminds us of the party's allegiance to capital."—Independent John Fine offers a major reassessment of the history of Greece from prehistoric times to the rise of Alexander. Throughout he indicates the nature of the evidence on which our present knowledge is based, masterfully explaining the problems and pitfalls in interpreting ancient accounts. A first for the world's greatest cartoon reporter, a collection of journalism, including articles on the American military

in Iraq that have never been published in the United States. Over the past decade, Joe Sacco, "our moral draughtsman" (Christopher Hitchens), has increasingly turned to short-form comics journalism to report from the sidelines of wars around the world. Collected here for the first time, Sacco's darkly funny, revealing reportage confirms his standing as one of the foremost war correspondents working today. In "The Unwanted," Sacco chronicles the detention of Saharan refugees who have washed up on the shores of Malta; "Chechen War, Chechen Women" documents the trial without end of widows in the Caucasus; and "Kushinagar" goes deep into the lives of India's untouchables, who are hanging "onto the planet by their fingernails." Other pieces take Sacco to the smuggling tunnels of Gaza; the trial of Milan Kovacevic, Bosnian warlord, in The Hague; and the darkest chapter in recent American history, Abu Ghraib. And on a mission with American troops—pieces never published in the United States—he confronts the misery and absurdity of the war in Iraq. Among Sacco's most mature, accomplished work, *Journalism* demonstrates the power of our premier cartoonist to chronicle human experience

with a force that often eludes other media. This book provides the first detailed history of one of the most powerful international sport organisations, the International Association of Athletics Federations (IAAF), since 2019 known as World Athletics. The book critically assesses the internal power relations within the IAAF by focusing on the IAAF leadership. Based on extensive archival research, *Power and Politics in World Athletics* offers a nuanced analysis of the institutionalised strategies that developed as a reflection of the IAAF's interests and aims to create a broader understanding of the global sport system. With only six presidents in over a century of existence, the IAAF's leaders had profound impacts on other international institutions, national stakeholders and sporting participants. Through four sections, the book identifies various key turning points in the history of the governing body of athletics, and explores the IAAF's foundation, the policies of past IAAF presidents, and controversial issues such as doping, corruption and manipulation through a socio-historical lens. The book shows that while anyone could take part in athletics, policies enacted by each

president served to ostracize those groups who did not fit into the IAAF's vision of an equal playing field. This book is essential reading for anyone with an interest in sport history, sport sociology, the politics of sport, sport management, sport governance, or international organisations.
