The Cult of Smart Fredrik deBoer, 2020-08-04 Named one of Vulture's Top 10 Best Books of 2020 Leftist firebrand Fredrik deBoer exposes the lie at the heart of our educational system and demands top to bottom reform Everyone agrees that education is the key to creating a more just and equal world and that our schools are broken and failing Proposed reforms variously target incompetent teachers corrupt union practices or outdated curricula but no one acknowledges a scientifically proven fact that we all understand intuitively Academic potential varies between individuals and cannot be dramatically improved In *The Cult of Smart* educator and outspoken leftist Fredrik deBoer exposes this omission as the central flaw of our entire society which has created and perpetuated an unjust class structure based on intellectual ability Since cognitive talent varies from person to person our education system can never create equal opportunity for all Instead it teaches our children that hierarchy and competition are natural and that human value should be based on intelligence These ideas are counter to everything that the left believes but until they acknowledge the existence of individual cognitive differences progressives remain complicit in keeping the status quo in place This passionate voice driven manifesto demands that we embrace a new goal for education equality of outcomes We must create a world that has a place for everyone not just the academically talented But we'll never achieve this dream until the Cult of Smart is destroyed *Archaeology, Anthropology, and Interstellar Communication* National Aeronautics Administration, Douglas Vakoch, 2014-09-06 Addressing a field that has been dominated by astronomers physicists engineers and computer scientists the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence These scholars are grappling with some of the enormous challenges that will face humanity if an information rich signal emanating from another world is detected By drawing on issues at the core of contemporary archaeology and anthropology we can be much better prepared for contact with an extraterrestrial civilization

should that day ever come

**Beyond the Cognitive Map** A. David Redish, 1999 There are currently two major theories about the role of the hippocampus a distinctive structure in the back of the temporal lobe One says that it stores a cognitive map the other that it is a key locus for the temporary storage of episodic memories A David Redish takes the approach that understanding the role of the hippocampus in space will make it possible to address its role in less easily quantifiable areas such as memory Basing his investigation on the study of rodent navigation one of the primary domains for understanding information processing in the brain he places the hippocampus in its anatomical context as part of a greater functional system Redish draws on the extensive experimental and theoretical work of the last 100 years to paint a coherent picture of rodent navigation His presentation encompasses multiple levels of analysis from single unit recording results to behavioral tasks to computational modeling From this foundation he proposes a novel understanding of the role of the hippocampus in rodents that can shed light on the role of the hippocampus in primates explaining data from primate studies and human neurology The book will be of interest not only to neuroscientists and psychologists but also to researchers in computer science robotics artificial intelligence and artificial life

**The Technology of Teaching** B. F. Skinner, 2016-04-26 On Parent s Day in 1952 B F Skinner visited his daughter s fourth grade math class As he watched the lesson he became increasingly uncomfortable Almost every principle of effective teaching that he had studied for more than 20 years was being violated in that classroom Yet it was a typical class The teacher showed how to solve the day s problems then gave the students a worksheet to do Some children began to work readily while others shifted uncomfortably in their chairs or raised their hands for help The teacher went from desk to desk giving help and feedback Skinner knew what was needed Each student should be given a problem tailored precisely to his or her skill level not to the class average and every answer needed to be assessed immediately to determine the next step The task was clearly impossible for one teacher That afternoon Skinner set to work on a teaching machine Today s computers have made the mechanical machine obsolete but the principles of how to design instruction in steps that lead from a basic level to competent performance are as valid today as they were in the 20th century This book brings together Skinner s writings on education during the years he was most involved in improving education

*Merriam-Webster's Vocabulary Builder* Mary W.
