

4.

a)  $f$  is increasing when  $f'(x) > 0$  or  $\boxed{-3 \leq x < -2}$

b) The second derivative is positive when the first derivative is increasing and negative when the first derivative is decreasing. The first derivative goes from decreasing to increasing or the second derivative changes sign at  $\boxed{x = 0}$  and the first derivative goes from increasing to decreasing or the second derivative changes sign at changes  $\boxed{x = 2}$ .

c) From the graph,  $f'(x) = -2$  when  $x = 0$ . The derivative is the slope function, so the slope of the curve at  $(0, 3)$  is  $-2$ . The equation of the tangent line then would be  $y - 3 = -2(x - 0) = \boxed{y = -2x + 3}$

d)  $\int f'(x) dx = f(x) + C$  The integral of a curve is the area under the curve,

$$f(-3) + \int_{-3}^0 f'(x) dx = f(0)$$

$$\int_{-3}^0 f'(x) dx \text{ by calculating area under curve gives } +\frac{1}{2} - 2 = -\frac{3}{2}$$

$$\text{Thus, } f(-3) - \frac{3}{2} = 3 \rightarrow \boxed{f(-3) = \frac{9}{2} \text{ or } 4.500}$$

$$\text{Similarly, } f(0) + \int_0^4 f'(x) dx = f(4)$$

The integral computed by finding the area of the figure subtracting the area of the semicircle from the rectangle from the origin to  $(0, -2)$  to  $(4, -2)$  to  $(4, 0)$ . The area of the semi-circle is  $\frac{\pi r^2}{2} = 2\pi$  and the area of the rectangle is 8. The value of the

$$\text{integral is } 2\pi - 8 \text{ so } f(0) + \int_0^4 f(x) dx = f(4) = 3 + 2\pi - 8 = \boxed{2\pi - 5 \text{ or } 1.283}$$

**Understanding by Design** Grant P. Wiggins,Jay McTighe,2005 What is understanding and how does it differ from knowledge How can we determine the big ideas worth understanding Why is understanding an important teaching goal and how do we know when students have attained it How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today s high stakes standards based environment Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design* Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998 the authors have greatly revised and expanded their original work to guide educators across the K 16 spectrum in the design of curriculum assessment and instruction With an improved UbD Template at its core the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks Readers will learn why the familiar coverage and activity based approaches to curriculum design fall short and how a focus on the six facets of understanding can enrich student learning With an expanded array of practical strategies tools and examples from all subject areas the book demonstrates how the research based

principles of Understanding by Design apply to district frameworks as well as to individual units of curriculum Combining provocative ideas thoughtful analysis and tested approaches this new edition of Understanding by Design offers teacher designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike

fully revised and expanded This textbook covers the mathematics needed to model analyze and design feedback systems Now more user friendly than ever this revised and expanded edition of Feedback Systems is a one volume resource for students and researchers in mathematics and engineering It has applications across a range of disciplines that utilize feedback in physical biological information and economic systems Karl str m and Richard Murray use techniques from physics computer science and operations research to introduce control oriented modeling They begin with state space tools for analysis and design including stability of solutions Lyapunov functions reachability state feedback observability and estimators The matrix exponential plays a central role in the analysis of linear control systems allowing a concise development of many of the key concepts for this class of models str m and Murray then develop and explain tools in the frequency domain including transfer functions Nyquist analysis PID control frequency domain design and robustness Features a new chapter on design principles and tools illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self contained resource on control theory **Fast Track to A 5** Sharon Cade,2006 Regions and Powers Barry Buzan,Ole Wæver,2003-12-04 This book develops the idea that since decolonisation regional patterns of security have become more prominent in international politics The authors combine an operational theory of regional security with an empirical application across the whole of the international system Individual chapters cover Africa the Balkans CIS Europe East Asia EU Europe the Middle East North America South America and South Asia The main focus is on the post Cold War period but the history of each regional security complex is traced back to its beginnings By relating the regional dynamics of security to current debates about the global power structure the authors unfold a distinctive interpretation of post Cold War international security avoiding both the extreme oversimplifications of the unipolar view and the extreme deterritorialisations of many globalist visions of a new world disorder Their framework brings out the radical diversity of security dynamics in different parts of the world The Mathematics of Diffusion John Crank,1979 Though it incorporates much new material this new edition preserves the general character of the book in providing a collection of solutions of the equations of diffusion and describing how these solutions may be obtained **All of Statistics** Larry Wasserman,2013-12-11 Taken literally the title All of Statistics is an exaggeration But in spirit the title is apt as the book does cover a much broader range of topics than a typical introductory book on mathematical statistics This book is for people who want to learn probability and statistics quickly It is suitable for graduate or advanced undergraduate students in computer science mathematics statistics and related disciplines The book includes modern topics like non parametric curve estimation bootstrapping and classification topics that are usually relegated to follow up courses The reader is presumed to know calculus and a little linear algebra No previous knowledge of probability and statistics is required Statistics data mining
