Examines the 1984 "war" that pitted Pratt and Whitney against GE in head-to-head competition for multi billion dollar defense contracts to provide high performance engines for front line fighter aircraft. The circumstances surrounding the lengthy battle led to the Air Force decision to split future engine sales between the two. Attempts to cut through emotional opinions of the "combatants," to report reality, and to identify lessons learned. Helps the reader to understand the government-to-contractor personality issues; to understand management styles, business expectations and communication skills of key participants. It was a dark, blustery afternoon in spring, and the city of London was chasing a small mining town across the dried-out bed of the old North Sea. So begins Philip Reeve's *Mortal Engines*, the first book in his epic post-apocalyptic series of giant motorized cities on wheels. But how did the world end up like this? What led to the downfall of our civilization, and to the rise of the Traction Cities that roam the Great Hunting Ground to attack and devour each other? Now, for the first time, discover the untold future history of Traction. This lavishly illustrated book contains incredible tales of fearsome Zagwan warriors riding war-zebras into battle, daring air-traders flying the Bird-Roads in search of adventure, and the mysterious plague-ridden wasteland of the Dead Continent that was formerly known as 'North America'. This definitive companion guide includes detailed maps, fascinating character profiles, and stunning colour illustrations from incredible artists, including Ian McQue, David Wyatt, Aedel Fakhrie, Maxime Plasse, Rob Turpin, Philip Varbano and Amir Zand. *MORTAL ENGINES* is soon to be a major motion picture. In *Engines of Innovation*, Holden Thorp and Buck Goldstein make the case for the pivotal role of research universities as agents of societal change. They argue that universities must use their vast intellectual and financial resources to confront global challenges such as climate change, extreme poverty, childhood diseases, and an impending worldwide shortage of clean water. They provide not only an urgent call to action but also a practical guide for our nation's leading institutions to make the most of the opportunities available to be major players in solving the world's biggest problems. A preface and a new chapter by the authors address recent developments, including innovative licensing strategies, developments in online education, and the value of arts and sciences in an entrepreneurial society. From the national legal director of the ACLU, an essential guidebook for anyone seeking to stand up for fundamental civil liberties and rights One of Washington Post's Notable Nonfiction Books of 2016 In an age of executive overreach, what role do American citizens have in safeguarding our Constitution and defending liberty? Must we rely on the federal courts, and the Supreme Court above all, to protect our rights? In *Engines of Liberty*, the esteemed legal scholar David Cole argues that we all have a part to play in the grand civic dramas of our era--and in a revised introduction and conclusion, he proposes specific tactics for fighting Donald Trump's policies. Examining the most successful rights movements of the last thirty years, Cole reveals how groups of ordinary Americans confronting long odds have managed, time and time again, to convince the courts to grant new rights and protect existing ones. *Engines of Liberty* is a fundamentally new explanation of how our Constitution works and the part citizens play in it. Ford FE engines, which were manufactured from the late 1950s all the way through the mid-1970s, were designated as the large-displacement engines in the Ford lineup. FE means Ford Edsel, and reflects an era when Ford sought to promote the Edsel name. The design of these engines was implemented to increase displacement over its predecessor, the Y-Block engines of the previous decade. Early models were fairly modest in displacement, as were most big-blocks of the era, but they grew quickly to fill the needs of rapidly changing chassis requirements and consumer demand for larger vehicles. As it grew, the FE engine performed admirably as a heavy passenger car and light truck engine. It also became quite accomplished in performance circles, winning the 24 Hours of Le Mans, as well as powering Ford's muscle car and drag racing programs in the mid- to late 1960s. In this book, you will learn everything you need to know to rebuild one of these legendary engines. CarTech's unique Workbench series format takes you step-by-step through the entire rebuilding process. Covered are engine identification and selection, disassembly, cleaning, parts analysis and assessment, machine shop processes, replacement parts selection, re-assembly and start-up/break-in techniques. Along the way you find helpful tips on performance upgrades, trouble spots to look for, special tools required, and professional builder's tips. FE master, owner of Survival Motorsports, and veteran author Barry Raboutnick shares all of his tricks and secrets on building a durable and reliable FE engine. Whether you are simply rebuilding an old truck for reliable service use, restoring a 100-point show car, or building the foundation for a high-performance street and strip machine, this book will be an irreplaceable resource for all your future FE engine projects. Death and pleasure. Freud's Todestrieb, his statement that "libido has the task of making the destroying instinct innocuous, and it fulfills the task by diverting that instinct to a great extent outwards.... The instinct is then called the destructive instinct, the instinct for mastery, or the will to power." Few authors have spun stories of Thanatos and Eros as skillfully and powerfully as Livia Llewellyn. In his introduction to this volume, Laird Barron writes, "Scant difference exists between exquisite pleasure and pain." An orphan girl with a mind for anthracite falls into the hands of a cult worshipping an entombed god. In the Pacific Northwest, evergreens lull prepubescent girls into their trunks to serve as wombs. A suburban housewife troubled by her present encounters the sixteen-year-old girl she ached to touch in her dreams. These ten stories promise to indulge a reader's sensibilities, fears, and desires. A finalist for the Shirley Jackson Award in two categories: Best Novella and Best Collection! Excerpt from Ericsson's Caloric Engine: General Agency and Depot for the Sale of Caloric Engines A result more important in view of the number of engines employed is exhibited on the New York Central Railroad, on the line of which there are now some 20 of these engines in daily use. Mr. Chauncey Vibbard, the Superintendent of that road, reports, over his Official signature, after several months' experience with a number of these engines, that they perform an incredible amount Of labor for the small quantity of fuel consumed. One of them, he says, for 96-100 of a cent per hour, does the work formerly done by four men, at an expense of \$25 each per month. Another of the same size, at the Savannah station, at an expense of eleven cents a day. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. If your hobby is amateur radio or electronics you will often need coils in a variety of size, type, specification, etc.. Coils are no longer as easy to find as they were 20 years ago so you will have to wind your own. With the help of this simple yet detailed manual you'll quickly build a machine that can wind universal and honey comb coils, single layer and multi layer solenoids, close wound and space-wound coils, and pi-spaced coils such as those used for r-f chokes and transformers. And the mechanical counter gives you total control of accuracy. In the distant future, when cities move about and consume smaller towns, a fifteen-year-old apprentice is pushed out of London by the man he most admires and must seek answers in the perilous Out-Country, aided by one girl and the memory of another. A nationally recognized author looks at both the similarities and differences in the engine company operations practiced by fire departments throughout the'nited States. He discusses the equipment, staffing, and operations of enginecompany firefighters at structural fires and emergencies. This historic book may have numerous typos and missing text. (6) Columns for Discount on Purchases and Discount on Notes on the same side of the Cash Book; (c) Columns for Discount on Sales and Cash Sales on the debit side of the Cash Book; (d) Departmental columns in the Sales Book and in the Purchase Book. Controlling Accounts.--The addition of special columns in books of original entry makes possible the keeping of Controlling Accounts. The most common examples of such accounts are Accounts Receivable account and Accounts Payable account. These summary accounts, respectively, displace individual customers' and creditors' accounts in the Ledger. The customers' accounts are then segregated in another book called the Sales Ledger or Customers' Ledger, while the creditors' accounts are kept in the Purchase or Creditors' Ledger. The original Ledger, now much reduced in size, is called the General Ledger. The Trial Balance now refers to the accounts in the General Ledger. It is evident that the task of taking a Trial Balance is greatly simplified because so many fewer accounts are involved. A Schedule of Accounts Receivable is then prepared, consisting of the balances found in the Sales Ledger, and its total must agree with the balance of the Accounts Receivable account shown in the Trial Balance. A similar Schedule of Accounts Payable, made up of all the balances in the Purchase Ledger, is prepared, and it must agree with the balance of the Accounts Payable account of the General Ledger." The Balance Sheet.--In the more elementary part of the text, the student learned how to prepare a Statement of Assets and Liabilities for the purpose of disclosing the net capital of an enterprise. In the present chapter he was shown how to prepare a similar statement, the Balance Sheet. For all practical... Considers legislation to exempt automobile manufacturers and dealers from antitrust restraint of trade laws in order to prevent resale of new cars by dealers to other dealers.
