"A guide to the press of the United Kingdom

and to the principal publications of Europe, Australia, the Far East, Gulf States, and the U.S.A. In the thirteenth century, the Mongols created a vast transcontinental empire that functioned as a cultural 'clearing house' for the Old World. Under Mongol auspices various commodities, ideologies and technologies were disseminated across Eurasia. The focus of this path-breaking study is the extensive exchanges between Iran and China. The Mongol rulers of these two ancient civilizations 'shared' the cultural resources of their realms with one another. The result was a lively traffic in specialist personnel and scholarly literature between East and West. These exchanges ranged from cartography to printing, from agriculture to astronomy. The book concludes by asking why the Mongols made such heavy use of sedentary scholars and specialists in the elaboration of their court culture and why they initiated so many exchanges across Eurasia. This

is a work of great erudition which crosses new scholarly boundaries in its analysis of communication and culture in the Mongol empire. Intellectual property law in Australia has changed dramatically in the last decade and continues to change. Developments in technology, the rise of the internet, the globalisation of trade and the increasing importance of 'superbrands' - trade marks with global appeal - have all affected the laws surrounding intellectual property.

Furthermore, globalisation has resulted in greater pressure on intellectual property owners to expand their rights as they endeavour to capture the potential benefits of ownership in an increasingly affluent and integrated world economy. Australian Intellectual Property Law, 2nd edition has been fully revised to take into account these significant case and legislative developments in trademarks, copyright and patents law. This book offers students and legal professionals a detailed discussion of the black-letter

aspects of the law, with a primary emphasis on legal principles and complexities.
