### SHORT-RESPONSE (SR)

- ▶ Students are presented with two sample student responses and are asked to select the high scoring answer
- ▶ Reinforces writing skills by comparing two sample answers.

Select the student response that received the high score.

Look at the model of the Earth as it revolves around the Sun. Choose the point (A, B, C, or D) at which the Northern Hemisphere of the Earth has the longest day (longest amount of sunlight). Explain why that point in the Earth's revolution around the Sun receives the longest amount of sunlight for the Northern Hemisphere.

**A** When the Northern Hemisphere is tilted toward the sun, it is exposed to the Sun's light for longer because the Earth's rotation is slower. This causes the days to be longer in the Northern Hemisphere. Because the days are longer in this hemisphere, Point A receives the most light.

**B** When the Northern Hemisphere is tilted toward the Sun, more of the Northern Hemisphere's surface area is exposed to the light from the Sun. When the hemisphere receives more light from the Sun, this causes the days to be longer. Point A receives the longest amount of sunlight and has the longest day.
