Creative Solutions Accounting Training

Accounting for Culture Caroline Andrew, 2005-03-30 Many scholars practitioners and policy makers in the cultural sector argue that Canadian cultural policy is at a crossroads that the environment for cultural policy making has evolved substantially and that traditional rationales for state intervention no longer apply The concept of cultural citizenship is a relative newcomer to the cultural policy landscape and offers a potentially compelling alternative rationale for government intervention in the cultural sector Likewise the articulation and use of cultural indicators and of governance concepts are also new arrivals emerging as potentially powerful tools for policy and program development Accounting for Culture is a unique collection of essays from leading Canadian and international scholars that critically examines cultural citizenship cultural indicators and governance in the context of evolving cultural practices and cultural policy making It will be of great interest to scholars of cultural policy communications cultural studies and public administration alike *Creativity and Divergent Thinking* John Baer, 2014-01-09 Do general purpose creative thinking skills skills like divergent thinking which is touted as an important component of creative thinking no matter what the task domain actually make much of a contribution to creative performance Although much recent research argues against such domain transcending skills including several new studies reported in this book the appeal of such general skills remains strong probably because of the theoretical economy and power such skills would provide Divergent thinking in particular has had an incredible staying power Despite its many flaws divergent thinking remains the most frequently used indicator of creativity in both creativity research and educational practice and divergent thinking theory has a strong hold on everyday conceptions of what it means to be creative Reviewing the available research on divergent thinking this book presents a framework for understanding other major theories of creativity including Mednick's associative theory and a possible connectionist approach of creativity It reports a series of studies including the study that won APA's 1992 Berlyne Prize that demonstrate the absence of effects of general creative thinking skills across a range of creativity relevant tasks but indicate that training in divergent thinking does in fact improve creative performance across diverse task domains The book then ties these findings together with a multi level theory in which a task specific approach to creativity is strengthened by recasting some divergent thinking concepts into domain and task specific forms This book fills the gap between divergent thinking theory and more recent modular conceptions of creativity Rather than advocate that we simply discard divergent thinking an approach that hasn't worked or at least hasn't happened because of many attacks on its validity and usefulness this book shows how to separate what is useful in divergent thinking theory and practice from what is not It shows that divergent thinking training can be valuable although often not for the reasons trainers think it works And it offers specific suggestions about the kinds of creativity research most needed today
