Intermolecular Forces Lab Worksheet - Answer Key

Directions: Today you will complete two experiments that compare the properties of water to isopropanol (a type of rubbing alcohol). Before conducting each experiment, you will first read about the experiment and then make a prediction about what you think will happen. Afterward you do the experiment, you will write an explanation of what was happening at the atomic level that let us observe these properties.

Introduction: In many ways, water is a miracle liquid. It is essential for all living things on earth and it is often referred to as a universal solvent because many substances dissolve in it. Water displays unusual properties due to the ways the individual water molecules interact with each other.

1. Draw the structural formula (with lone pairs) for the two molecules we will be comparing today, water (H_2O) and isopropanol ($\text{C}_3\text{H}_8\text{O}$). Draw a dipole arrow to show the direction the electrons are being pulled and label the areas of partial positive and negative charges.

2. Which molecule is more polar? water

Experiment #1: Penny

How many drops of water fit on the head of a penny? How many drops of isopropanol fit on the head of a penny?

Prediction:

- a. I think _____ drops of water will fit on the head of the penny because _____

POGIL Activities for AP* Chemistry Flinn Scientific,2014 **Argument-Driven Inquiry in Physical Science** Jonathon Grooms,Patrick J. Enderle,Todd Hutner,Ashley Murphy,Victor Sampson ,2016-10-01 Are you interested in using argument driven inquiry for middle school lab instruction but just aren t sure how to do it Argument Driven Inquiry in Physical Science will provide you with both the information and instructional materials you need to start using this method right away The book is a one stop source of expertise advice and investigations to help physical science students work the way scientists do The book is divided into two basic parts 1 An introduction to the stages of argument driven inquiry from question identification data analysis and argument development and evaluation to double blind peer review and report revision 2 A well organized series of 22 field tested labs designed to be much more authentic for instruction than traditional laboratory activities The labs cover four core ideas in physical science matter motion and forces energy and waves Students dig into important content and learn scientific practices as they figure out everything from how thermal energy works to what could make an action figure jump higher The authors are veteran teachers who know your time constraints so they designed the book with easy to use reproducible student pages teacher notes and checkout questions The labs also support today s standards and will help your students learn the core ideas crosscutting concepts and scientific practices found in the Next Generation Science Standards In addition the authors offer ways for students to develop the disciplinary skills outlined in the Common Core State Standards Many of today s middle school teachers like you want to find new ways to engage students in scientific practices and help students learn more from lab activities Argument Driven Inquiry in Physical Science does all of this while also giving students the chance to practice reading writing speaking and using math in the context of science STEM Student Research Handbook Darci J. original contributions with an abundant supply of back ground material for the uninitiated reader and thoughtful reviews from a number of researchers on mineralogic thermodynamics on the application of thermochemistry to planetary phase equilibria including meteorites and on kinetics of geochemical reactions [Advanced Techniques for Surface Engineering](#) W. Gissler, H.A. Jehn, 1992-10-31 The hardest requirements on a material are in general imposed at the surface it has to be wear resistant for tools and bearings corrosion resistant for turbine blades antireflecting for solar cells and it must combine several of these properties in other applications Surface engineering is the general term that incorporates all the techniques by which a surface modification can be accomplished These techniques include both the more traditional methods such as nitriding boriding and carburizing and the newer ones such as ion implantation laser beam melting and in particular coating This book comprises and compares in a unique way all these techniques of surface engineering It is a compilation of lectures which were held by renowned scientists and engineers in the frame of the well known EuroCourses of the Joint Research Centre of the Commission of the European Communities The book is principally addressed to material and surface scientists physicists and chemists engineers and technicians of industries and institutes where surface engineering problems arise

Active Protective Coatings Anthony E. Hughes, Johannes M.C. Mol, Mikhail L. Zheludkevich, Rudolph G. Buchheit, 2016-03-01 This book covers a broad range of materials science that has been brought to bear on providing solutions to the challenges of developing self healing and protective coatings for a range of metals The book has a strong emphasis on characterisation techniques particularly new techniques that are beginning to be used in the coatings area It features many contributions written by experts from various industrial sectors which examine the needs of the sectors and the state of the art The development of self healing and protective coatings has been an expanding field in recent years and applies a lot of new knowledge gained from other fields as well as other areas of materials science to the development of coatings It has borrowed from fields such as the food and pharmaceutical industries who have used polymer techniques sol gel science and colloidosome technology for a range encapsulation techniques It has also borrowed from fields like hydrogen storage such as from the development of hierarchical and other materials based on organic templating as nanocontainers for the delivery of inhibitors In materials science recent developments in high throughput and other characterisation techniques such as those available from synchrotrons are being increasingly used for novel characterisation one only needs to look at the application of these techniques in self healing polymers to gauge wealth of new information that has been gained from these techniques This work is largely driven by the need to replace environmental pollutants and hazardous chemicals that represent risk to humans such as chromate inhibitors which are still used in some applications [Lab-on-Fiber Technology](#) Andrea Cusano, Marco Consales, Alessio Crescitelli, Armando Ricciardi, 2014-07-29 This book focuses on a research field that is rapidly emerging as one of the most promising ones for the global optics and photonics community the lab on fiber technology Inspired by the well established lab on a chip concept this new technology essentially envisages novel and highly
